Sustainable Energy And Environmental Technologies - Proceedings Of The Third Asia Pacific Conference Xijun Hu, Po Lock Yue, 2000-11-28 With the rapid expansion of the Asia Pacific economy in the last decade and the recovery after the recent crisis severe demands will be placed on energy services and the environment Coping with the volatile oil prices that persist in the market introduces an additional factor into the energy supply and demand equation not just for countries in this region

but also worldwide. Inevitably there will be implications for environmental issues too. The future will see a continuing challenge to balance growth with sustainability in the economic, social and environmental sectors. This conference, a sequel to the immensely successful APCSEET conferences held in Singapore and Australia, is aimed at meeting that challenge by addressing the pertinent issues related to sustainable energy and environmental protection. It provides a forum for participants from academia, industry and government agencies to interact, report on research in progress and identify opportunities in the fields of sustainable energy and environmental technologies. The presentations include not only technical issues such as air pollution control, wastewater treatment, solid waste management, renewable energy and cleaner production, but also education and policy issues.

Process Engineering and Design Using Visual Basic® Arun Datta, 2013-09-20
Software tools are a great aid to process engineers, but too much dependence on such tools can often lead to inappropriate and suboptimal designs. Reliance on software is also a hindrance without a firm understanding of the principles underlying its operation, since users are still responsible for devising the design. Non-CO₂ Greenhouse Gases: Scientific Understanding, Control and Implementation J. van Ham, A.P.M. Baede, L.A. Meyer, R. Ybema, 2013-06-29
In the climate change discussion, non-CO₂ greenhouse gases (NCGGs) received official political recognition for the first time in 1997 when agreement was reached on the Kyoto Protocol. As a result, methane, nitrous oxide, HFCs, PFCs and SF₆ now provide attractive options for detailing the national targets for the reduction of greenhouse gas emissions meant to control climate change. This book is the second volume in this area and addresses three main topics. Firstly, it documents progress with respect to our knowledge of the

sources and sinks of NCGGs Information on this subject is essential in order to reduce the uncertainties in national emissions inventories which serve as the reference values for commitments of countries in the framework of the Kyoto Protocol Secondly this volume deals with the control options for the NCGGs and contains a wealth of information in this area Emerging technologies here provide business opportunities in particular in connection with the flexible mechanisms for mitigation projects in developing countries which have been agreed in Kyoto Thirdly the book treats the policy implementation of mitigation options for greenhouse gas emissions Tools for control policies both on the national and international level and for different sectors of industry are discussed National integrated approaches including the ones from the United States Environmental Protection Agency and the Netherlands Ministry of Environment which both sponsored the conference provide guidance for defining the most effective greenhouse gases mitigation plans in different situations This volume is being published in support of the IPCC Process and will serve as a reference for IPCC s Third Assessment Report

Air Pollution Control Engineering Noel de Nevers, 2010-05-07 Air pollution control can be approached from a number of different engineering disciplines environmental chemical civil and mechanical To that end Noel de Nevers has written an engaging overview of the subject While based on the fundamentals of chemical engineering the treatment is accessible to readers with only one year of college chemistry In addition to discussions of individual air pollutants and the theory and practice of air pollution control devices de Nevers devotes about half the book to topics that influence device selection and design such as atmospheric models and U S air pollution law The generous number of end of chapter problems are designed to develop more complex thinking about the concepts presented and integrate them with readers personal experience increasing the likelihood of deeper understanding
