Handbook for Teaching Introductory Psychology Michelle Rae Hebl, Charles L. Brewer, Ludy T. Benjamin, Jr., 2001-08-01 Like its predecessors Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology TOP the official journal of the Society for the Teaching of Psychology Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One: Issues and Approaches in Teaching Introductory Psychology contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives; students' existing knowledge of psychology, including their misconceptions; a comparison of introductory textbooks; and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology. Introductory Psychology for Teachers Edward Kellogg Strong, 1922 *Best Practices for Teaching Introduction to Psychology* Dana S. Dunn, Stephen L. Chew, 2006-04-21 This new book provides a scholarly yet practical approach to the challenges found in teaching introductory psychology. *Best Practices for Teaching Introduction to Psychology* addresses developing the course and assessing student performance; selecting which topics to cover and in how much depth; the effective use of teaching assistants (TAs) and efficient and fair ways to construct and grade exams; choosing the best textbook; assessment advice on how to demonstrate students are learning; using on-line instruction; writing exercises; and class demonstrations. Teaching majors and non-majors in the same classroom. This book will appeal to veteran and novice educators who teach introductory psychology as well as graduate students teaching the course for the first time. It will also serve as an excellent resource in faculty workshops on teaching introductory psychology. Brief Introductory Psychology for Teachers Edward Kellogg Strong, 1922

This comprehensive text covers both theoretical and empirical metacognitive research in educational, developmental, cognitive, and applied psychology. To answer these and many other questions, the authors assess major theoretical themes and programmatic research in the field. The authors also include chapters that define the scope of metacognition and cover its historical origins. Not only do they describe well-received theories about the nature of metacognition, but they also highlight unresolved mysteries currently on the cutting edge of research.

Lay Theories Michael Argyle, 2013-10-22 Lay theories: the informal common-sense explanations people give for particular social behaviours are often very different from formal scientific explanations of what actually happens. While they have been studied in the past, this is the first attempt to review in detail the nature of these beliefs. More specifically, it is the first study to consider such fundamental questions as the structure, aetiology, stability, and consequence of lay theories about a range of topics. Each chapter covers a different area, such as psychology, psychiatry, medicine, economics, statistics, law, and education.
