

Notes: Inverse Variation

Remember that two variables x and y show direct variation if $y = ax$ and $a \neq 0$. The letter "a" represents the "Constant of Variation". The equation for the

Constant of Variation is $a = \frac{y}{x}$

On the contrary, if two variables show **inverse variation**, then they have the equation

$y = \frac{a}{x}$ or $a = yx$.

If two variables vary inversely, the products of every x and y combination are the same.

For example,

x	-3	-2	2
y	6	9	-9

So, $6(-3) = -18$, $9(-2) = -18$, $2(-9) = -18$

So this is another way to identify inverse variation. The Constant of Variation for this example would be $a = 6(-3) = -18$ so the equation would be $y = \frac{-18}{x}$.

Does $xy = 4$ represents an inverse variation? Yes, because we can write it in the form

$y = \frac{a}{x}$ or $y = \frac{4}{x}$.

The equation $\frac{y}{2} = x$ can be written as $y = 2x$ so it represents a direct variation.

The equation $y = 2x + 3$ is neither, as this is not in the form of direct or inverse variation.

Direct Variation $y = ax$ $a = \frac{y}{x}$	Inverse Variation $y = \frac{a}{x}$ $a = yx$

Threatening in English Julia Muschalik, 2018-01-15 Threatening is among the less pleasant things we do with words but together with other conflictive speech acts it seems to play a central role in communication Yet little is still known about how and when exactly speakers threaten The present volume addresses this void by giving an in depth analysis of the form and function of this speech act A set of authentic threat utterances is used to probe questions on the linguistic repertoire employed and the different objectives speakers pursue with their threats Based on the central findings a classification of two types of threats is proposed each with distinctive formal and functional properties The analysis employs a mixed method approach with a two fold aim by combining a qualitative discussion of examples with the application of innovative statistical methodology the findings allow new insights into research on threats and simultaneously offer new
