Dear readers of Frontiers in Built Environment As the Field Chief Editor for Frontiers in Built Environment I am happy to present this curated selection of papers that have made a significant impact within our community Among the large number of submissions that we received these 14 papers represent

some of the best published in 2023 the year when the journal attained its first impact factor With many high quality papers to consider in selecting these 14 articles we faced the challenging task of how to include papers from across the 15 distinct sections of the journal whilst at the same time achieving a sense of cohesion to the ebook overall However amidst this diversity we noticed a convergence in our highest quality papers around three pivotal themes that are central to our journal s mission resilience sustainability and technology In this way despite the broad range of topics covered within both our journal and this selection this ebook can truly be considered representative of our journal as a whole These carefully chosen papers encompass high quality original research and comprehensive reviews which also embody the ethos of innovation and excellence that defines our journal As the Field Chief Editor I am thankful to all authors who have enriched our journal with their high caliber work I extend sincere appreciation to the dedicated efforts of our editors and reviewers whose invaluable contributions have been instrumental in shaping Frontiers in Built Environment in 2023 Lake Hydrology William LeRoy Evans III,2021-06-03 This book describes the physics of water flow into and out of lake systems explaining the physical parameters that influence lake behavior and the mathematics that describes these systems This book is aimed at working professionals graduate and advanced undergraduate students of limnology and researchers involved in lake management lake remediation or investigation of lake systems Energy Abstracts for Policy Analysis ,1985 **Chemical Biology Editor's Pick 2024** John D. Wade,2024-12-06 We are pleased to introduce the collection Frontiers in Chemistry Chemical Biology Editor s Pick 2024 This collection showcases the most well received spontaneous articles from the past couple of years and have been specially handpicked by our Chief Editors The work presented here highlights the broad diversity of research performed across the section and aims to put a spotlight on the main areas of interest All research presented here displays strong advances in theory experiment and methodology with applications to compelling problems **Globalized Poverty and Environment** Nathaniel O. Agola,Joseph L. Awange,2014-07-08 This book reviews the key conceptions and economic theories of poverty explains poverty environment nexus and finally offers innovative socio economic and scientific geospatial solutions for the 21st Century The book makes it possible for our readers to understand poverty thorough a concise review of the major theoretical economic frameworks measures of poverty and points out the need to understand rural urban dichotomy of poverty We find the theories and measures to be less than perfect and therefore point out the need to treat these measures and theories as convenient tools lacking perfect accuracy and utmost scientific reliability It follows then that the supposedly knowledgeably crafted poverty reduction and environmental preservation solutions are inherently imperfect The economic solutions proposed in this book transcend extant humdrum macroeconomic and policy measures targeting poverty and environmental issues We point to a new paradigm in which private sector and other stakeholders can create new and inclusive markets where value is co created and shared Above all this book offers timely state of the art geospatial solutions targeting the most pressing global problems of water e g the use of the Gravity Recovery and Climate

Experiment GRACE missions to estimate changes in stored water in the water poverty environment nexus pollution agriculture and disaster management where geospatial techniques are applied under strong environmental impact assessment regulatory regimes This book provides a good summary of economic theories of poverty as well as a vivid depiction of the state of environmental degradation in the world People often work separately on different issues that are in fact closely intertwined The principle of holism is that the whole is greater than the sum of its parts and I believe that this joint venture of two experts on poverty and environment has produced something more than a sum of two separate monographs on the issues Various points raised in this volume are worth heeding when we think of formulation and implementation of a truly effective post MDGs development agenda Yoichi Mine Professor of Human Security and African Area Study Graduate School of Global Studies Doshisha University Japan *Coastal Extension of CMEMS Products.
