Facilitator's Guidebook for Use of

Mathematics Situations in Professional Learning Rose Mary Zbiek,Glendon W. Blume,M. Kathleen Heid,2018-01-01 The depth and breadth of a mathematics teacher's understanding of mathematics matter most as the teacher engages in the daily work of teaching One of the major challenges to teachers is to be ready to draw on the relevant mathematical ideas from different areas of the school curriculum and from their postsecondary mathematics experiences that can be helpful in explaining ideas to students making instructional decisions creating examples and engaging in other aspects of their daily work Being mathematically ready and confident requires teachers to engage in ongoing professional learning that helps them to connect mathematics to events like those they live on a daily basis The purpose of this volume is to provide teachers

teacher educators and other facilitators of professional learning opportunities with examples of authentic events and tools for discussing those events in professional learning settings The work shared in Facilitator's Guidebook for Use of Mathematics Situations in Professional Learning Guidebook resulted from a collaborative effort of school mathematics supervisors and university mathematics educators The collaborators joined their varied experiences as teachers coaches supervisors teacher educators and researchers to suggest ways to scaffold activities encourage discussion and instigate reflection with teacher participants of differing mathematics backgrounds and with varying teaching assignments Each guide has ideas for engaging and furthering mathematical thought across a range of facilitator and participant mathematics backgrounds and draws on the collaborators' uses of the Situations with in-service and prospective teachers The events and mathematical ideas connected to each event come from Situations in Mathematical Understanding for Secondary Teaching A Framework and Classroom Based Situations A Situation is a description of a classroom related event and the mathematics related to it For each of six Situations school and university collaborators developed a facilitator's guide that presents ideas and options for engaging teachers with the event and the mathematical ideas The Guidebook also contains suggestions for how teachers and others might develop new Situations based on events from their own classrooms as a form of professional learning Both teacher educators and school-based facilitators can use this volume to structure sessions and inspire ideas for professional learning activities that are rooted in the daily work of mathematics teachers and students

The Education Invasion Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in

elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies

Pedagogy and ICT Use in Schools around the World Nancy Law,Willem J. Pelgrum,Tjeerd Plomp,2008-09-08 How is information and communication technology ICT changing teaching and learning practices in secondary schools worldwide in the 21st century This is the central question addressed by researchers involved in the series of surveys comprising the Second Information Technology in Education Study SITES The question is a multifaceted one with each facet raising additional questions relating to both theory and practice These include the following What traditional and new pedagogies are evident in the 21st century What is the role of ICT in the teaching and learning process What ICT infrastructure is available in schools How can teachers and their administrators be prepared for effective practice How have these conditions and considerations changed since the first SITES survey in 1998 What are the trends within and between national education systems What do the differences and similarities between these systems suggest How should change be promoted in education in order to support teachers in their work Is there evidence that key strategic factors commonly found in ICT related educational policies do influence teachers pedagogical use of ICT Because these questions are interconnected the SITES 2006 researchers recognized that if we are to make sense of changes in pedagogical practices as a result of ICT use

then we need to view those practices in terms of the interacting layers in the 22 education systems surveyed *Your Mathematics Standards Companion, Grades 3-5* Linda M.
