Lectures on Tensor Categories and Modular Functors Bojko Bakalov, Alexander A. Kirillov, 2001 This book gives an exposition of the relations among the following three topics monoidal tensor categories such as a category of representations of a quantum group 3 dimensional topological quantum field theory and 2 dimensional modular functors which naturally arise in 2 dimensional conformal field theory The following examples are discussed in detail the category of representations of a quantum group at a root of unity and the Wess Zumino Witten modular functor The idea that these topics are related first appeared in the physics literature in the study of quantum field theory Pioneering works of Witten and Moore Seiberg triggered an avalanche of papers both physical and mathematical exploring various aspects of these relations Upon preparing to lecture on the topic at MIT however the authors discovered that the existing literature was difficult and that there were gaps to fill The text is wholly expository and finely succinct It gathers results fills existing gaps and simplifies some proofs The book makes an important addition to the existing literature on the topic It would be suitable as a course text at the advanced graduate level
