Machado, Carlos Pereira, P.S. Thiagarajan, 2007-01-29 Embedded computing systems have started to carry out the key control functions in diverse domains such as telecommunications automotive electronics avionics and even complete industrial manufacturing lines Traditionally such embedded control systems have been implemented in a monolithic centralized manner However distributed and parallel solutions have been steadily gaining popularity In a distributed setup the control task is carried out by a number of controllers distributed over the entire system and interconnected as a network by communication components such as field buses More demanding local control applications require controllers based on parallel architectures or processors with dedicated co processors Distribution and parallelism in embedded system design increase the engineering challenges and demand new development methods and tools *From Model Driven Design to Resource Management for Distributed Embedded Systems* contains 16 original contributions as well as 12 invited papers by distinguished invited speakers These papers were presented at the Working Conference on Distributed and Parallel Embedded Systems DIPES 2006 which was held in October 2006 in Braga Portugal and sponsored by the International Federation for Information Processing IFIP This volume covers the following very timely topics model driven design test and evolution of embedded systems timing analysis and predictability scheduling allocation communication and resource management in distributed real time systems *Morphological Image Processing: Architecture and VLSI design* P.P. Jonker, 2012-12-06 Summary Based on the experiences of past designs and the outcome of recent studies in the comparisons of low level image processing architectures a pipelined system for real time low image processing has been designed and realized in CMOS technology To minimize design pitfalls a study was performed to the details of the design solutions that have been found in embodiments of the three main architectural groups of image processing the Square Processor Arrays the Linear Processor Arrays and the Pipelines This is reflected in a theoretical model As the design is based on bitplane wise processing of images research was performed on the principles of Cellular Logic Processing of two dimensional images of binary A methodology has been developed that is based on the transformation images using sets of Hit or Miss masks This method appeared to be extendable to higher dimensional images A theoretical model for the generation of break point conditions in high dimensional images has been developed and applied up to dimension three **Using Microprocessors and Microcomputers** William C. Wray, Joseph D. Greenfield, Ross Bannatyne, 1999 Reflecting the most recent changes in the ever advancing Motorola Microcontroller market this leading textbook for the Motorola family of microprocessors remains at the forefront of its field Now in its Fourth Edition it builds upon the traditional coverage of 8 bit technology to include the exciting applications of Motorola's microcontrollers the 68HC11 family and goes beyond to include many new high
