To understand garbage, both industrial and domestic, you have to touch it, feel it and smell it. You have to pick through hundreds of tons of it, counting and weighing all the daily newspapers, the directories, the soiled diapers, the lipstick cylinders coated with grease, the medicine vials still encasing brightly coloured pills, the forsaken toys, and cigarette butts. You have to sort and weigh the volume of all the organic matter, discards from thousands of plates: rice; ugali; fish heads to which justice has hardly been done; rotting water melons bleeding from gaping holes; the half eaten bananas, mostly still within their peels, black and incomparably sweet in the embrace of the final decay.

To understand garbage, you need thick gloves, a mask and a vibrant immune system. However, the knowledge harvested from a dumpsite makes up for the grim working conditions. To an archaeologist, ancient garbage pits are among the happiest finds. Every archaeologist dreams of discovering spectacular objects — but the bread and butter work of archaeology involves the most common and routine kinds of discards.

Interestingly, much conventional wisdom about garbage and its disposal consists of myths and assertions that turn out, upon investigation, to be misleading or dead wrong. For example, plastics are assumed to constitute the highest quantity of waste matter. For the record, the item most frequently encountered in a dump site is plain old paper. At one point, there was a lot of talk about how technology, computers in particular, would bring about “paperless office” — a risky prediction, given the way things have turned out. Personal computers and printers grace many offices and homes today. Consequently, where the creation of paper waste is concerned, technology is proving to be a fertility drug rather than a contraceptive.

Concerning plastics, it is true that the number of plastic objects has been increasing over the years. Nevertheless, the proportion of space they take up in a dump site has hardly changed. The explanation appears to be the result of what is called “light-weighting” - making objects in such a way that they retain all their functional characteristics but require the use of less resin. These days, even the plastic in disposable diapers ensures that they enter the house very light but leave it much heavier than ever before. The result is that many more plastic items can be squeezed into a given volume.

Plastics are the Great Satan: gaudy, cheap, a convenient scapegoat for people who claim we waste and consume too much. Although it is paper more than anything else that is filling up the dumpsites, in its defense one frequently hears the claim that paper biodegrades while plastic remains inert and will take up space until the end of time.

Not really.

The reality is that the dynamics of a modern dumpsite are very nearly the opposite of what most people think. Biologically and chemically, a dumpsite is much more static than we commonly assume. For some kinds of garbage, biodegradation goes on for a while and then slows down to a virtual standstill. For other kinds, biodegradation never gets underway at all.

Camelot and Canada Asa McKercher,2016-06-20 In 1958 Senator John F Kennedy of Massachusetts proclaimed at the University of New Brunswick that Canada and the United States have carefully maintained the good fences that help make them good neighbours He could not have foreseen that his presidency would be marked not just by some of the tensest moments of the Cold War but also by the most contentious moments in the Canadian American relationship Indeed the 1963 Canadian federal election was marked by charges that the US government had engineered a plot to oust John Diefenbaker Canada s nationalist prime minister Camelot and Canada explores political economic and military elements in Canada US relations in the early 1960s Asa McKercher challenges the prevailing view that US foreign policymakers including President Kennedy were imperious in their conduct toward Canada Rather he shows that the period continued to be marked by the special diplomatic relationship that characterized the early postwar years Even as Diefenbaker s government pursued distinct foreign and economic policies American officials acknowledged that Canadian objectives legitimately differed from their own and adjusted their policies accordingly Moreover for all its bluster Ottawa rarely moved without weighing the impact that its initiatives might have on Washington At the same time McKercher

illustrates that there were significant strains on the bilateral relationship which occurred as a result of mounting doubts in Canada about US leadership in the Cold War growing Canadian nationalism and Canadian concern over their country's close economic military and cultural ties with the United States While personal clashes between the two leaders have become mythologized by historians and the public alike the special relationship between their governments continued to function
