Evolutionary Based Solutions for Green Computing Samee Ullah Khan, Joanna Kolodziej, Juan Li, Albert Y. Zomaya, 2012-08-14 Today's highly parameterized large scale distributed computing systems may be composed of a large number of various components computers databases etc and must provide a wide range of services The users of such systems located at different geographical or managerial network cluster may have a limited access to the system's services and resources and different often conflicting expectations and requirements Moreover the information and data processed in such dynamic environments may be incomplete imprecise fragmentary and overloading All of the above mentioned issues require some intelligent scalable methodologies for the management of the whole complex structure which unfortunately may increase the energy consumption of such systems An optimal energy utilization has reached to a point that many information technology IT managers and corporate executives are all up in arms to identify scalable solution that can reduce electricity consumption so that the total cost of operation is minimized of their respective large scale computing systems and simultaneously improve upon or maintain the current throughput of the system This book in its eight chapters addresses the fundamental issues related to the energy usage and the optimal low cost system design in high performance green computing systems The recent evolutionary and general metaheuristic based solutions for energy optimization in data processing scheduling resource allocation and communication in modern computational grids cloud and network computing are presented along with several important conventional technologies to cover the hot topics from the fundamental theory of the green computing concept and to describe the basic architectures of systems This book points out the potential application areas and provides detailed examples of application case studies in low energy computational systems The development trends and open research issues are also outlined All of those technologies have formed the foundation for the green computing that we know of today

Numerical Simulations of Physical and Engineering Processes Jan Awrejcewicz, 2011-09-26 Numerical Simulations of Physical and Engineering Process is an edited book divided into two parts Part I devoted to Physical Processes contains 14 chapters whereas Part II titled Engineering Processes has 13 contributions The book handles the recent research devoted to numerical simulations of physical and engineering systems It can be treated

as a bridge linking various numerical approaches of two closely inter related branches of science i.e physics and engineering. Since the numerical simulations play a key role in both theoretical and application oriented research professional reference books are highly needed by pure research scientists applied mathematicians engineers as well post graduate students. In other words it is expected that the book will serve as an effective tool in training the mentioned groups of researchers and beyond.
