LABORATORY OBJECTIVES

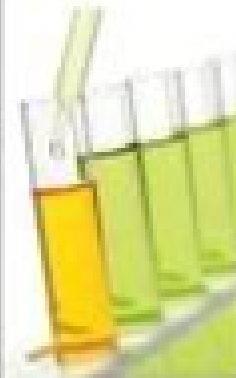

- Discuss the function of catalase.
- Identify the role of enzymes in chemical reactions.
- Be able to identify different sources of catalase.
- Predict the effect of temperature on enzymatic activity.
- Predict the effect of pH on enzymatic activity.

Introduction

What would happen to your cells if they made a poisonous chemical?

You might think that they would die. In fact, your cells are always making poisonous chemicals. They do not die because your cells use enzymes to break down these poisonous chemicals into harmless substances. **Enzymes** are proteins that speed up the rate of reactions that would otherwise happen more slowly. The enzyme is not altered by the reaction. You have hundreds of different enzymes in each of your cells.

Each of these enzymes is responsible for one particular reaction that occurs in the cell. In this lab, you will study an enzyme that is found in the cells of many living tissues. The name of the enzyme is **catalase**; it speeds up a reaction, which breaks down hydrogen peroxide, a toxic chemical, into two harmless substances—water and oxygen.
