Wet-type Clutch

The oil system of this clutch is a self-contained system and uses oil returning from the return power cylinder. Having cooled the clutch, the oil is driven against the walls of the housing by the centrifugal force created by the flywheel and

returns to the hydraulic tank. The input shaft is identical in construction with that for the dry-type clutch. As for oil, use hydraulic oil (Diamond 32S-5).

The power clutch used in the manual transmission models is a system of control linkage for the wet-type clutch.

The clutch release cylinder automatically compensates for changes in the position of the release lever due to wear of the clutch disc springs. Because of this feature, there is no need of adjusting the pedal if it is properly adjusted at the time of assembly.

NOTE

The dry-type clutch linkage is nearly identical with the wet-type clutch one, the only difference being the absence of clutch housing. In this linkage, the clutch pedal is directly connected to the master cylinder push rod.
