

## UROGENITAL SYSTEM

12. The reproductive system and the urinary system of the frog are closely connected and can be studied as the combined urogenital system. The two kidneys are reddish-brown organs located on the dorsal posterior wall of the abdominal cavity. The kidneys lie on either side of the backbone. The kidneys remove wastes from and regulate fluid balance in the blood. **NOTE:** The kidneys may be covered with a thin membrane. If so, carefully tear open the membrane with the point of a dissecting needle. The yellow, fingerlike structures are the fat bodies. Fat bodies store energy for hibernation. A small, twisted tube called the ureter leads from each kidney into the saclike urinary bladder. The urinary bladder temporarily stores urine. The urinary bladder is connected to the cloaca. The cloaca collects urine, feces, eggs and sperm before they leave the body.
13. Locate the reproductive organs of the frog. If your frog is a male, it possesses testes, tiny white or yellow organs found on the ventral surface of the kidneys.
14. If your frog is a female, it possessed egg-filled ovaries that were removed earlier. If your frog is an immature female, the pale, empty ovaries are located ventral to the kidneys. Leading from each ovary is a long, coiled tube called the oviduct. The oviduct eventually joins the cloaca.
15. Label the following parts of the male AND female urogenital systems: (7 Points)
