

School-Home Letter

Dear Family,

During the next few weeks, our math class will be learning about *division facts and strategies*. We will learn strategies to use to *divide by 2, 3, 4, 5, 6, 7, 8, 9, and 10*. We will also learn the *order of operations rules* to solve problems involving more than one operation.

You can expect to see homework that provides practice with *dividing by these divisors*.

Here is a sample of how your child will be taught to divide.

Vocabulary

array An arrangement of objects in rows and columns

equation A number sentence that uses the equal sign to show that two amounts are equal

order of operations A special set of rules that gives the order in which calculations are done to solve a problem

related facts A set of related multiplication and division equations

MODEL Use an Array

This is how we can use arrays to divide.

STEP 1

$$20 \div 4 = \square$$

Draw rows of 4 tiles until you have drawn all 20 tiles.

STEP 2

Count the number of rows to find the quotient.

There are 5 rows of 4 tiles.

$$\text{So, } 20 \div 4 = 5.$$

Tips

Use a Related Multiplication Fact

Since division is the opposite of multiplication, using a multiplication fact is another way to find a quotient. To divide 20 by 4, for example, think of a related multiplication fact: $4 \times \square = 20$.
 $4 \times 5 = 20$.
 So, $20 \div 4 = 5$.

Activity

Provide 12 pennies. Have your child make as many arrays as possible using all 12 pennies. Have your child write a division equation for each array.
