The World in a Crucible Sally Newcomb, 2009-01-01 Geology coalesced as a discipline in the early part of the nineteenth century with the coming together of many strands of investigation and thought The theme of experimentation and or instrument aided observation is absent from most recent accounts of that time which rely on an admixture of theory and field observations informed by close examination of minerals James Hutton emerged as the person who had it right with suggestion of a central heat source for Earth while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief as opposed to sober application of observed facts However despite several claims that Hutton had won the day primary literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton derided information derived from looking into a little crucible This Special Paper makes the case that it was just those parameters of heat pressure solution and composition discovered in the laboratory that prevented resolution of the overriding questions about rock origin

Hypotheses and Perspectives in the History and Philosophy of Science Raffaele Pisano, Joseph Agassi, Daria Drozdova, 2017-11-23 To commemorate the 50th anniversary of his passing in 2014 this special book features studies on Alexandre Koyr 1892 1964 one of the most influential historians of science of the 20th century who re evaluated prevalent thinking on the history and philosophy of science In particular it explores Koyr s intellectual matrix and heritage within interdisciplinary fields of historical epistemological and philosophical scientific thought Koyr is rightly noted as both a versatile historian on the birth and development of modern science and for his interest in philosophical questions on the nature of scientific knowledge In the 1940s and 1950s his activities in the United States established a crucial bridge between the European historical tradition of science studies and

the American academic environments and an entire generation of historians of science grew up under his direct influence. The book brings together contributions from leading experts in the field and offers much needed insights into the subject from historical nature of science and philosophical perspectives. It provides an absorbing and revealing read for historians, philosophers and scientists alike. *Contemporary Newtonian Research* Z. Bechler, 2012-12-06

them in his cheat preface to Copernicus *De Revolutionibus* but the main change in their import has been that whereas Osiander defended Copernicus, Mach and Duhem defended science. The modern conception of hypothetico-deductive science is again geared to defend the respectability of science in much the same way the physical interpretation it says is merely and always hypothetical and so the scientist is never really committed to it. Hence when science sheds the physical interpretation off its mathematical skeleton as time and refutation catch up with it, the scientist is not really caught in error for he never was committed to this interpretation in the first place. This is the apologetic essence of present-day Popper-like versions of the idea of science as a mathematical core cum interpretational shell. This is also Cohen's view for it aims to free Newton of any existential commitment to which his theory might allegedly commit him. It will be readily seen that Cohen regards this methodological distinction between mathematics and physics to be the backbone of the Newtonian revolution in science which is in its turn the climax of the whole Scientific Revolution for a very clear reason: it enables us to argue that Newton could use freely the new concept of centripetal force even though he did not believe in physical action at a distance and could not conceive how such a force could act to produce its effects. 3 pp. **The Athenaeum**, 1891. *The Optical Papers of Isaac Newton*, **Studies in Criticism and Aesthetics** Howard Anderson, *Stars and Relativity* Ya. B. Zel'dovich, I. D. Novikov, 2014-06-10

Two of the greatest astrophysicists of the 20th century explore general relativity properties of matter under astrophysical conditions: stars and stellar systems. A valuable resource for physicists, astronomers, graduate students. 1971 edition.
