Building a Website: Understanding the Basics of HTML and CSS

1. Introduction to HTML and CSS

Web design involves creating a visual representation of a website using HTML and CSS. HTML (Hypertext Markup Language) is the backbone of the web, while CSS (Cascading Style Sheets) is used to style the content.

This document is designed to help you understand the basics of HTML and CSS. It covers the following topics:

- What is HTML and CSS?
- How to create a simple website using HTML and CSS.
- How to style a website using CSS.
- How to create a responsive website.

The document is divided into two main sections: HTML and CSS. Each section contains a list of topics to be covered, followed by a detailed explanation of each topic.

2. HTML Basics

HTML (Hypertext Markup Language) is a markup language used to create web pages. It consists of a series of tags that tell the browser how to display the content. The basic structure of an HTML document is as follows:

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="UTF-8">
    <title>My First Web Page</title>
  </head>
  <body>
    <h1>Hello, World!</h1>
  </body>
</html>
```

The <!DOCTYPE html> tag tells the browser that the document is an HTML document. The <html> tag is the root element of the document. The <head> section contains meta-information about the document, such as the character set and the title. The <body> section contains the main content of the document.

3. CSS Basics

CSS (Cascading Style Sheets) is a style sheet language used to describe the look and formatting of a document written in HTML. It is used to control the layout, colors, and fonts of a web page. The basic structure of a CSS document is as follows:

```
body {
  background-color: #f0f0f0;
  color: #333;
  font-family: sans-serif;
  font-size: 1em;
  line-height: 1.2;
  margin: 0;
  padding: 0;
}

h1 {
  font-size: 2em;
  margin: 0;
}
```

The CSS document is a list of rules that define the style of the HTML elements. Each rule consists of a selector and a list of properties and values. The selector is used to identify the HTML element to be styled. The properties and values are used to define the style of the element.
