Human Impact on Ancient Environments Charles L. Redman, 1999-10 Threats to biodiversity food shortages urban sprawl lessons for environmental problems that confront us today may well be found in the past The archaeological record

contains hundreds of situations in which societies developed long term sustainable relationships with their environments and thousands in which the relationships were destructive Charles Redman demonstrates that much can be learned from an improved understanding of peoples who through seemingly rational decisions degraded their environments and threatened their own survival By discussing archaeological case studies from around the world from the deforestation of the Mayan lowlands to soil erosion in ancient Greece to the almost total depletion of resources on Easter Island Redman reveals the long range coevolution of culture and environment and clearly shows the impact that ancient peoples had on their world These case studies focus on four themes habitat transformation and animal extinctions agricultural practices urban growth and the forces that accompany complex society They show that humankind s commitment to agriculture has had cultural consequences that have conditioned our perception of the environment and reveal that societies before European contact did not necessarily live the utopian existences that have been popularly supposed Whereas most books on this topic tend to treat human societies as mere reactors to environmental stimuli Redman s volume shows them to be active participants in complex and evolving ecological relationships Human Impact on Ancient Environments demonstrates how archaeological research can provide unique insights into the nature of human stewardship of the Earth and can permanently alter the way we think about humans and the environment

A Primer on Human Impacts on the Environment Liam Heneghan,2023-03-14 An insightful and illuminating discussion of the impact humans have had on Earth In A Primer on Human Impacts on the Environment The Conceptual Approach distinguished environmental

scientist Liam Heneghan explores the intricate relationships between humanity and Earth in an accessible and engaging style. Replete with real world examples and drawing from classic and contemporary scholarship, the author adapts the fundamental conceptual models of the environmental disciplines to assess the risks human beings are taking with their home planet. The conceptual approach of this primer challenges readers to think across multiple disciplines to reveal the big picture that is all too often lost in the details of contemporary environmental studies. Readers will also find a thorough introduction to conceptual modeling showing how systems models can be adapted and applied in a rapidly changing world. Comprehensive explorations of the human impact on the Earth including an examination of possible ecological limits and planetary boundaries. In depth evaluations of environmental risks especially though not limited to climate change and biodiversity loss. A guide to contemplating catastrophic risk and the potential for societal collapse without inducing unnecessary anxiety. An interdisciplinary focus emphasizing the role of the natural and social sciences as well as the arts and humanistic disciplines in safeguarding the future. Perfect for students of environmental science and environmental studies. A Primer on Human Impacts on the Environment will also earn a place in the libraries of graduate students working on environmental themes and practicing professionals in the environmental management community.
