©Harvard Medical School 2009

Our organisms manufacture antibodies automatically to many molecules, proteins, and microorganisms. Among others, when foreign red-cell surface glycoproteins (antigens) are in the bloodstream they stimulate the immune system to manufacture antibodies. These antibodies (antibodies) are produced by lymphocytes (B-cells) and plasma cells. These antibodies are used for killing microorganisms that enter the bloodstream. This fighting must not interfere with the normal functions of the blood.
