technology inverse synthetic aperture radar ISAR technology digital beam forming DBF interferometry and moving target detection methods are discussed in detail The book is a must read and comprehensive reference for researchers and engineers engaged in the R D of the SAR and for graduate students interested in the field **NASA Technical Memorandum** ,1990 Arapahoe Basin Ski Area Master Development Plan, Construction and Operation, COE Section 404 Permit, White River National Forest ,1999 **Foundations of Algebraic Geometry** Andr  Weil,1946-12-31 This classic is one of the cornerstones of modern algebraic geometry At the same time it is entirely self contained assuming no knowledge whatsoever of algebraic geometry and no knowledge of modern algebra beyond the simplest facts about abstract fields and their extensions and the bare rudiments of the theory of ideals *Applied Mechanics Reviews* ,1988 **Popular Science** ,1974-04 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better Integrating Conservation Biology and Paleobiology to Manage Biodiversity and Ecosystems in a Changing World G. Lynn Wingard,Chris Schneider,Gregory P. Dietl ,Damien Fordham, Policy makers and resource managers must make decisions that affect the resilience and sustainability of natural resources including biodiversity and ecosystem services However these decisions are often based on evidence or theory derived from highly altered systems and over short time periods of low magnitude environmental and climatic change Because natural systems change and evolve across multiple timescales from instantaneous to millennial long term understanding of how past life has responded to perturbations can inform resource managers By using these natural laboratories of the past conservation paleobiology and paleoecology provide the framework necessary to anticipate and plan for future changes The goal of this Research Topic is to heighten awareness among conservation and restoration practitioners to the value and applications of long term perspectives provided by conservation paleobiology and paleoecology Most conservation studies focus on systems already impacted by anthropogenic change these studies would benefit from paleontological data through expanded temporal scales identification of baselines and an understanding of how organisms have responded to past changes However resource management decisions rarely include input from paleontologists and paleoecological research is rarely incorporated into conservation decision making We seek to bridge this research implementation gap by highlighting the application of paleoecological data to issues such as biodiversity dynamics extinction risks and resilience to perturbations among other topics We hope to foster new cross disciplinary synergies by encouraging conservation scientists and managers to collaborate with paleontologists to improve conservation decision making and by increasing awareness among paleontologists to the needs of the resource management community This Research Topic will provide a forum for both the paleontological and resource management communities to exchange ideas that will enhance restoration and conservation decision making We invite papers on conceptual advances reviews of specific topics to guide efforts in research or practice

case studies of successful applications articles describing datasets with applied value and perspective papers summarizing a body of paleontological research with relevance to the resource management community Topics can include but are not limited to Responses of species communities and ecosystems to perturbations Strategies to achieve the direct integration of paleobiology and paleoecology into on ground resource management Identifying baselines and reference conditions Increasing the robustness of forecasting models through the incorporation of paleontological data Identifying key species interactions and other phenomena as indicators of impending change New methodologies analytical tools and or proxies in the application of paleontological data to conservation and restoration practice Lynn Wingard Damien Fordham and Greg Dietl have no conflicts of interest Chris Schneider has a potential conflict of interest where manuscripts pertain to stakeholders in the petroleum industry as she is an independent contractor in the Alberta Oil Sands mining area *Wildlife Ecology, Conservation, and Management* John M. Fryxell, Anthony R. E. Sinclair, Graeme Caughley, 2014-08-11 To understand modern principles of sustainable management and the conservation of wildlife species requires intimate knowledge about demography animal behavior and ecosystem dynamics With emphasis on practical application and quantitative skill development this book weaves together these disparate elements in a single coherent textbook for senior undergraduate and graduate students It reviews analytical techniques explaining the mathematical and statistical principles behind them and shows how these can be used to formulate realistic objectives within an ecological framework This third edition is comprehensive and up to date and includes Brand new chapters that disseminate rapidly developing topics in the field habitat use and selection habitat fragmentation movement and corridors population viability analysis the consequences of climate change and evolutionary responses to disturbance A thorough updating of all chapters to present important areas of wildlife research and management with recent developments and examples A new online study aid a wide variety of downloadable computer programs in the freeware packages R and Mathcad available through a companion website Worked examples enable readers to practice calculations explained in the text and to develop a solid understanding of key statistical procedures and population models commonly used in wildlife ecology and management The first half of the book provides a solid background in key ecological concepts The second half uses these concepts to develop a deeper understanding of the principles underlying wildlife management and conservation Global examples of real life management situations provide a broad perspective on the international problems of conservation and detailed case histories demonstrate concepts and quantitative analyses This third edition is also valuable to professional wildlife managers park rangers biological resource managers and those working in ecotourism [Genetic Algorithms and Remote Sensing Technology for Tracking Flight Debris](#) Marghany, Maged, 2020-06-26 The tragic disappearance of the Malaysia Airlines Flight MH370 has created a need for research in the areas of aircraft transportation and specifically flight debris tracking As researchers and scientists continue to search for novel technologies that will assist with aeronautical detection two modes have emerged as possible solutions

The use of remote sensing technology and genetic algorithms are techniques that scientists are beginning to use to improve aircraft trajectory models and to locate downed aircraft. Genetic Algorithms and Remote Sensing Technology for Tracking Flight Debris is an essential reference source that discusses developing tracking methods using advanced algorithms as well as satellite technologies. Featuring research on topics such as wave pattern modeling, microwave satellite data, and trajectory movement, this book is ideally designed for practitioners, researchers, oceanographers, aerospace engineers, scientists, educators, developers, analysts, and students seeking coverage on advancements in sensor and tracking technology in regard to flight dynamics.
