Mechatronics is defined as the interdisciplinary field of engineering and design methodology. It deals with the design of products whose function relies on the integration of mechanical, electrical and electronics components connected by a control scheme. Mechatronics is a system-level approach to designing electro-mechanical systems that merges mechanical, electrical, control system and embedded software design. Mechatronics plays an important role in the design manufacturing and maintenance of a wide range of engineering products and process. Mechatronics provides solutions that are efficient and reliable systems.
