Waegner,Geoffroy de Laforcade,Page R. Laws,2020-05-27 Migration is the most volatile sociopolitical issue of our time as the current escalation of discourse and action in the United States and Europe concerning walls border security refugee camps and deportations indicates The essays by the international and interdisciplinary group of scholars assembled in this volume offer critical filters suggesting that this escalation and its historical precedents do not preclude redemptive counterstrategies Encoded in narratives of affiliation and escape these counterstrategies are variously launched as literary cinematic and civic interventions in past and present constructions of diasporic migratory or exilic identities The essays trace these narratives through the figure of the exile as it moves across times borders and genres transmogrifying into the fugitive the escapee the refugee the nomad the Other Arguing that narratives and figures of

migration to and in Europe and the Americas share tropes that link migration to kinship community refuge and hegemony the volume identifies a transhistorical transcultural and transnational common ground for experiences of mediated diaspora migration and exile at a time when public discourse and policy making emphasize borders divisions and violent confrontations

Creative Encounters, Appreciating Difference Sam Gill, 2018-11-15 Across the world from personal relationships to global politics differences cultural religious racial gender age ability are at the heart of the most disruptive and disturbing concerns While it is laudable to nurture an environment promoting the tolerance of difference Creative Encounters Appreciating Difference argues for the higher goal of actually appreciating difference as essential to creativity and innovation even if often experienced as stressful and complex Even encounters that are apparently harmful and negatively valued arguments conflict war oppression usually heighten the potential for creativity innovation movement action and identity Drawing on classic encounters that have played a significant role in the founding of the academic study of religion and the social sciences this book explores in some depth the dynamics of encounter to reveal both its problematic and creative aspects and to develop perspectives and strategies to

assure encounters both include the appreciation of difference and also are recognized as creative and innovative The two examples most extensively considered show that the academic study of the peoples indigenous to North America and to Australia involved creative constructions concoctions of primary examples in order to establish and give authority to academic theories and definitions Rather than damning these examples as bad scholarship this book considers them to be encounters engendering creative constructions that are distinctive to academia yet their potential for harm must be understood Most important to the book is a persistent development of perspectives and strategies for understanding and approaching encounters in order to assure the appreciation of difference is accompanied by the potential for creativity and innovation Specific perspectives and strategies are related to naming moving gesture and play and particularly relevant to religion the development of an aesthetic of impossibles Since these historical examples engage highly relevant present concerns the distinction of real and fake truth and lie map and territory the threading essays show how these more or less classic examples might contribute to appreciating these contemporary concerns that are generated in the presence of difference

Bio A.I. - From Embodied Cognition to Enactive Robotics Adam Safron,Inês Hipólito,Andy Clark,2023-12-08 Even before the deep learning revolution the landscape of artificial

intelligence AI was already changing drastically in the 90s Embodied intelligence it was proposed must play a crucial role in the design of intelligent machines This new wave was inspired by what is today known as Embodied and Enactive Cognitive Science or E Cognition which considers that cognitive activity does not reduce to the intellectual capacities of agents being able to represent their environments E cognition set AI and robotics in a new direction in which intelligent machines are required to interact with the environment and where this interaction does not reduce to explicit representations or prespecified algorithms These ideas revolutionized the way we think about intelligent machines and cognition but these theoretical advances are only partially reflected in modern approaches to AI and machine learning ML Despite deeply impressive achievements AI ML still struggles to recapitulate the kinds of intelligence we find in natural systems whether we are considering individual insects e g simultaneous localization and mapping or swarm behaviour e g foraging sensing and ensemble inferences and especially the kinds of flexibility and high level reasoning characteristic of human cognition
