Kelsey,2000-01-01 The vision of a global future spread through the world like wildfire in the last decade exhilarating for some alarming for others apparently inexorable for all As free market advocates would have it there is no alternative Reclaiming the Future tells a different story that globalization is not inevitable invincible or intrinsically good The deregulated global economy has proved highly unstable The pursuit of unending growth is unsustainable and the social damage that free markets cause is provoking an international backlash Jane Kelsey explores the impact of globalization on the New Zealand economy Her account of foreign investment and free trade policies the role of the transnationals and the challenges posed by global agreements and networks will open the eyes of readers Reclaiming the Future opens wide the debate New Zealanders are seeking for the direction of their country in the twenty first century      **Prescription for the People** Fran Quigley,2017-11-15 In Prescription for the People Fran Quigley diagnoses our inability to get medicines to the people who need them and then prescribes the cure He delivers a clear and convincing argument for a complete shift in the global and U S approach to developing and providing essential medicines and a primer on how to make that change happen Globally 10 million people die each year because they are unable to pay for medicines that would save them The cost of prescription drugs is bankrupting families and putting a strain on state and federal budgets Patients desperate need for affordable medicines clashes with the core business model of the powerful pharmaceutical industry which maximizes profits whenever possible It doesn t have to be this way Patients and activists are aiming to make all essential medicines affordable by reclaiming medicines as a public good and a human right instead of a profit making commodity In this book Quigley demystifies statistics and terminology offers solutions to the problems that block universal access to medicines and provides a road map for activists wanting to make those solutions a reality      **Navigating Copyright for Libraries** Jessica Coates,Victoria Owen,Susan Reilly,2022-08-22 Information is a critical resource for personal economic and social development Libraries and archives are the primary access point to information for individuals and communities with much of the information protected by copyright or licence terms In this complex legal environment librarians and information professionals operate at the fulcrum of copyright s balance ensuring understanding of and compliance with copyright legislation and enabling access to knowledge in the pursuit of research education and innovation This book produced on behalf of the IFLA Copyright and other Legal Matters CLM Advisory Committee provides basic and advanced information about copyright outlines limitations and exceptions discusses communicating with users and highlights emerging copyright issues The chapters note the significance of the topic describe salient points of the law and legal concepts present selected comparisons of approaches around the world highlight opportunities for reform and advocacy and help libraries and librarians find their way through the copyright maze      *Living within a Fair Share Ecological Footprint* Robert Vale,Brenda Vale,2013-09-02 According to many authorities the impact of humanity on the earth is already overshooting the earth s capacity to supply humanity s needs This is an unsustainable position This book does not focus on the problem but on the

solution by showing what it is like to live within a fair earth share ecological footprint The authors describe numerical methods used to calculate this concentrating on low or no cost behaviour change rather than on potentially expensive technological innovation They show what people need to do now in regions where their current lifestyle means they are living beyond their ecological means such as in Europe North America and Australasia The calculations focus on outcomes rather than on detailed discussion of the methods used The main objective is to show that living with a reduced ecological footprint is both possible and not so very different from the way most people currently live in the west The book clearly demonstrates that change in behaviour now will avoid some very challenging problems in the future The emphasis is on workable practical and sustainable solutions based on quantified research rather than on generalities about overall problems facing humanity
