development of mathematical reasoning in both children and adults and to show how understanding the learner's cognitive processes can help teachers develop better strategies to teach mathematics. This contributed volume departs from the interdisciplinary field of psychology of mathematics education and brings together contributions by researchers from different fields and disciplines such as cognitive psychology, neuroscience and mathematics education. The chapters are presented in the light of the three instances that permeate the entire book: the learner, the teacher and the teaching and learning process. Some of the chapters analyse the didactic challenges that teachers face in the classroom such as how to interpret students' reasoning, the use of digital technologies and their knowledge about mathematics. Other chapters examine students' opinions about mathematics and others analyse the ways in which students solve situations that involve basic and complex mathematical concepts. The approaches adopted in the description and interpretation of the data obtained in the studies documented in this book point out the limits, the development and the possibilities of students' thinking and present didactic and cognitive perspectives to the learning scenarios in different school settings. **Mathematical Reasoning of Children and Adults: Teaching and Learning from an Interdisciplinary Perspective** will be a valuable resource for both mathematics teachers and researchers studying the development of mathematical reasoning in different fields such as mathematics education, educational psychology, cognitive psychology and developmental psychology. **Research on Teaching**

Strategies and Skills in Different Educational Stages Pedro Gil-Madrona, Linda Saraiva, Luisa

Losada-Puente, 2025-03-19 The teaching practice becomes a reciprocal activity in the classroom when teachers apply their creativity and their knowledge resulting from research and scientific evidence in the didactic teaching process with the purpose of strengthening in the students the key competencies of their training, turning students at the core of the didactic process. Teaching strategies must be articulated from previous research and planning and designed sequentially to promote real and interesting learning scenarios and thereby achieve significant learning. From this perspective of teaching learning strategies, the reciprocal interaction between the student and the teacher becomes the focus of attention with a playful, motivating, interesting and rewarding approach for the learner. The role of the teacher is conceived as fundamental in the teaching process to achieve the link between teaching, learning and evaluation strategies. For this reason, multidisciplinary studies are welcome from all stages of the educational system with quantitative, qualitative and mixed approaches and reviews promoting good teaching practices of reflection and innovation from these studies.
