The Certified Six Sigma Green Belt Handbook, Second Edition Roderick A.

Munro, Govindarajan Ramu, Daniel J. Zrymiak, 2015-05-13 This reference manual is designed to help those interested in passing the ASQ's certification exam for Six Sigma Green Belts and others who want a handy reference to the appropriate materials needed to conduct successful Green Belt projects. It is a reference handbook on running projects for those who are already knowledgeable about process improvement and variation reduction. The primary layout of the handbook follows the ASQ Body of Knowledge BoK for the Certified Six Sigma Green Belt CSSGB updated in 2015. The authors were involved with the first edition handbook and have utilized first edition user comments, numerous Six Sigma practitioners, and their own personal knowledge gained through helping others prepare for exams to bring together a handbook that they hope will be very beneficial to anyone seeking to pass the ASQ or other Green Belt exams. In addition to the primary text, the authors have added a number of new appendixes, an expanded acronym list, new practice exam questions, and other additional materials.

Measurement With Persons Birgitta Berglund, Giovanni B. Rossi, James T. Townsend, Leslie R. Pendrill, 2013-05-13
Measurements with persons are those in which human perception and interpretation are used for measuring complex holistic quantities and qualities which are perceived by the human brain and mind. Providing means for reproducible measurement of parameters such as pleasure and pain has important implications in evaluating all kinds of products, services, and conditions. This book inaugurates a new era for this subject, a multi- and inter-disciplinary volume in which world-renowned scientists from the psychological, physical, biological, and social sciences reach a common understanding of measurement theory and methods. In the first section, generic theoretical and methodological issues are treated, including the conceptual basis of measurement in the various fields involved, the development of formal representational and probabilistic theories, the approach to experimentation, and the theories, models, and methods for multidimensional problems. In the second section, several implementation areas are presented, including sound, visual, skin, and odor perception, functional brain imaging, body language, and emotions, and finally, the use of measurements in decision making. *Measurement with Persons* will appeal to a wide audience across a range of sciences, including general psychology and psychophysics, measurement theory, metrology, and instrumentation, neurophysiology, engineering, biology, and chemistry.
