N2 Fitting Quiz:

Probabilistic Solutions in Geotechnics L. Rétháti, 2012-12-02 This is the first monograph to consider the possibility of utilizing probability theory in all essential fields of geotechnics. It deals in detail with in situ and laboratory tests, the evaluation of soil physical characteristics, the preparatory phase and the individual problems of design including load bearing capacity, prediction of settlements, dimensioning of slopes and retaining walls, and quality control of earthworks. Numerous possibilities for and examples of the parallel utilization of deterministic and stochastic methods are given in the book, creating a connection between conventional and new modern methodologies. It demonstrates by examples that the only possibility of meeting technical and economic requirements simultaneously is by using the methods of probability theory. The book also gives an account of new geotechnical and mathematical results of the author: post evaluation of settlements and tilts, plotting of statistical bore profiles, elimination of the asymmetry of distribution by transformation etc. The book enables practitioners and to acquire new modern design methods and research to develop methods. It will also be useful for undergraduate and postgraduate training.

Thermal Barrier Coatings: Failure Theory and Evaluation Technology Yichun Zhou, Li Yang, Wang Zhu, 2022-10-08 This book highlights the failure theories and evaluation techniques of thermal barrier coatings covering the thermal mechanical chemical coupling theories, performance and damage characterization techniques and related evaluations. Thermal barrier coatings are the key thermal protection materials for high temperature components in advanced aeroengines. Coating spallation is a major technical bottleneck faced by researchers. The extremely complex microstructure, diverse service environments and failure behaviors bring challenges to the spallation analysis in terms of the selective use of mechanical theories, experimental methods and testing platforms. In the book, the authors provide a systematic summary of the latest research and technological advances and present their insights and findings in the past couple of decades. This book is not only suitable for researchers and engineers in thermal barrier coatings and related fields but also a good reference for upper undergraduate and postgraduate students of materials science and mechanics majors.

NBS Special Publication, 1968 **Carotenoids** Volker Böhm, 2019-12-05 Carotenoids are a group of natural pigments consisting of more than 750 compounds. They are mostly yellow, orange or red in color due to the system of conjugated double bonds. This structural element is also responsible for the good antioxidant properties of many carotenoids. Carotenoids have shown numerous biological activities, not only as provitamin A, e.g. preventive properties of fruits and vegetables. As lipophilic compounds, their uptake and storage in the body are dependent on various conditions. In vitro and in vivo data showed stimulating and inhibitory effects of matrix compounds on bioaccessibility and bioavailability of carotenoids. This Special Issue presents the most recent advances in carotenoids research in addition to the search for antioxidant properties. Chapters present the photoprotective properties of carotenoids as well as the activities of carotenoids related to liver health. Research data on the effect of degree of ripeness on carotenoids pattern in rosehip and possibilities to use shrimp waste as source of

carotenoids are presented Other investigations characterized apocarotenoids in microalgae and the properties of inclusion complexes of lycopene and beta cyclodextrin Biological activities of synthesized retinoyl flavonolignan hybrids were also reported In addition the effects of in vitro digestion of human milk on the micellization of carotenoids were investigated
