

Tips for naming molecules

There are three steps, though that I have found useful over the years. The first concerns organic molecules in their simplest form, those for primary school exams.

Remember that the name of an organic molecule has three parts:

- **Numbering** (if necessary)
- **Base**: the parent chain (length and C/C bonding)
 - o First realise that there will be a complexity
- **Suffix**: substituents attached by the highest priority functional group

1. Start off by identifying the highest priority functional group: this helps you determine the suffix of the molecule's name which can help you determine where you start numbering the parent chain. In subsequent paragraphs I will discuss how you begin to identify the parts of the molecule that will be added to the prefix.

There will be four C and H groups left you have to think about groups that are found in primary functional groups. The prefix is the key.

2. There begins to find the longest continuous carbon chain you can (the only thing is: branching is good)

- Make sure that you count the longest continuous chain (the highest priority functional group) that begins (the parent chain) and the first carbon
- o Carbon chain number, substituents, double bonds, triple bonds, etc.
- Find the other parts of the molecule that are attached to the parent chain (the number of the carbon to which they are attached)
- Always include the functional groups and multiple bonds in the structure

3. Begin to number the carbon chain. The number of the carbon chain is the only one that will be added to the parent chain number by the following substituents (if there are groups):

- The highest priority functional group
- Any multiple bonds
- The substituent attached to the chain
- The number of the carbon chain to which they are attached

4. Once you have numbered the parent chain, you can now find the appropriate name to indicate the longest chain chain.

5. Identify the other parts of the molecule (the substituents) and the parent chain and add them to the prefix. Additionally, identify the carbon chain to which they are attached (the number of the carbon chain to which they are attached)

- Only C/C single bonds: "and"
