Educational Innovation in Economics and Business V Lex Borghans,Wim H. Gijssels, Richard G. Milder, John E. Stinson, 2005-12-17 The workplace is changing drastically these days As a consequence of the Information and Communication Technology ICT revolution new economic activities emerge the production process changes people use different communication tools and organizational structures are adjusted All these changes relate to the heart of business and economics and there is no doubt that they will also influence education in these areas Of course ICT provides new technologies to facilitate learning but a changing workplace also requires a renewed focus within the curriculum of economics and business education If ICT is leading to profound change in the workplace is innovation then only a matter of introducing more technology in education Unfortunately this is not necessarily true The translation of changes in the workplace into an improved curriculum requires serious analysis of the essence of the changes at the work place and the way technology may enable student learning For example relevant knowledge is changing faster and faster Does this mean that we have to adopt the curriculum faster and faster Perhaps not as students will have a labor market career of 30 or 40 years Focusing on today's knowledge even if it is very up to date loses more and more value if the life cycle of knowledge becomes shorter Increased speed of change also implies a decrease in the value of knowing all these things

Cross-Linguistic Perspectives on Verb Constructions Signe Oksefjell Ebeling, Hilde Hasselgård, 2015-09-10 This volume sheds new light on verb constructions by exposing them to cross linguistic analysis based on multilingual corpora It is composed of nine studies which provide insights into various aspects of cross linguistic diversity including showing that seemingly equivalent verb constructions may differ in

their semantics and that similar meanings may be expressed by different types of constructions. In other words, this book shows that different languages have different ways of lexicalising verb-based meanings, most notably by means of other divergent verb constructions. A range of lexicogrammatical aspects of verb constructions are explored throughout the book, including time reference, modality, voice, light verb constructions, non-finite complementation of lexical verbs, posture verb constructions, semiperiphrastic constructions, and the construction and semantic composition of verbs of putting. All of the contributions consider English in comparison with at least one of the following languages: Czech, German, Lithuanian, Norwegian, Spanish, and Swedish. As such, this volume offers a truly multilingual perspective on verb constructions. The diversity of comparisons also highlights the multi-faceted nature of the verb phrase, which seems to have virtually limitless potential for exploration in the fields of tense, aspect, modality, lexical semantics, syntax, and phraseology.
