New Perspectives on Mineral Nucleation and Growth Alexander E.S. Van Driessche, Matthias Kellermeier, Liane G. Benning, Denis Gebauer, 2016-12-20 In the last decade numerous studies have demonstrated the existence of alternative pathways to nucleation and crystallisation that oppose the classical view Such proposed scenarios include multistage reactions proceeding via various precursor species and or intermediate phases The aim of this book is to review and discuss these recent advances in our understanding of the early stages of mineralisation through a series of contributions that address both experimental and theoretical studies about the formation and nature of initial precursor species e g prenucleation clusters dense liquid phases amorphous nanoparticles etc as well as their transformations leading to the stable mineral phase Several chapters are devoted to cutting edge analytical techniques used for investigating the above processes in situ in real time and at conditions relevant to both natural and industrial processes At the end of the book the editors summarize the key questions that still need to be addressed in order to establish a complete picture of the nucleation and growth processes involved during the formation of minerals

Folded Synthetic Peptides for Biomedical Applications Alessandro Contini,Jutta Eichler,2019-09-26 Folded peptides and peptide motifs within proteins are abundant in living organisms where they are essential for the biological activities of the peptides and proteins During the past decades much research has been dedicated to understanding the rules that govern peptide folding Simultaneously a range of strategies have been established for the conformational stabilization of bioactive peptides as well as for the de novo design of peptides with defined secondary structures These methods are either based on the chemical modification of the peptide backbone such as cyclization and stapled peptides or on the use of a range of non proteinogenic amino acids that in a defined sequential arrangement induce secondary structures peptides Such building blocks include D and other non proteinogenic

amino acids as well as beta and gamma amino acids This Research Topic comprises a collection of papers by an international group of 77 scientists with a background in synthetic analytical computational and medicinal chemistry as well as in biochemistry and pharmacology Their research is presented here in a total of 11 papers 8 original research reports and 3 reviews covering diverse aspects of folded synthetic peptides These studies include the preparation and characterization of new peptide monomers with interesting folding properties the synthesis and conformational analysis of non natural peptides as well as the use of folded peptidomimetics as molecular switches Additionally a range of biomedical applications such as antimicrobial anti inflammatory antiangiogenic and immune stimulating activities are also reported We hope this eBook will be a source of inspiration and knowledge for scientist in various disciplines related to folded peptides and their many applications as well as for those who want to learn more about this fascinating field of research

Nature Helps... Heinz Mehlhorn,2011-06-15 Nature helps of course at first itself by developing measures that give bacteria fungi plants and animals a chance to be successful in their struggle for life As a latecomer on Earth Homo sapiens was gifted with some droplets of the divine spirit of recognition and thus became able to observe to analyse and recombine skills of other living beings and to use them for his overwhelming career over the last 10 000 years Of course fungi plants animals and even bacteria were primarily used by mankind as food or as lifestyle products such as beer but soon it became clear that there was much more potential hidden in these organisms and that they could be used for other purposes too Extracts of plants and fungi were recognized as powerful remedies as medicines as insecticides or acarizides as repellents against parasites or even as weapons e g when poisonous compounds from frogs or plants were applied to arrowheads Over the last 110 years the pharmaceutical industry has often simulated nature by analyzing complex organic substances taken from living organisms and then producing by synthesis absolutely pure compounds which mostly consisted of only one single active substance These products had the advantage of acting against precisely one target and thus produced fewer possible side effects than the complex plant extracts However the more serious side effect was that disease agents could develop resistances to pure medicinal products much more easily Thus after 70 years of excellent prospects for chemotherapy some dark clouds appeared and quickly gathered so that several therapeutic remedies now no longer work Therefore in many

countries especially in those where the pure chemotherapeutics are too expensive for the poor population the cry back to nature is becoming louder and louder This has led to an enormous increase of studies that again use natural extracts as remedies in the fight against diseases The present book summarizes examples of promising aspects in a broad spectrum of applications and shows how extracts derived from bacteria marine organisms plants or even animals may help to treat infectious diseases how such organisms may keep away parasites and pests from the bodies of plants or animals including humans and how they can be used directly to aid in diagnosis promote wound healing and even to help catch criminals These 15 chapters offer not only basic research on these different fields but also show how useful and effective products can be developed from research
