

Process Definition

- A **business process** is a set of coordinated tasks and activities, conducted by both people and equipment, which will lead to accomplishing a specific organizational goal.
- **Business process management (BPM)** is a systematic approach to improving those processes.
- Defining the process is very important in the implementation of the ERP systems. This ensures that the **implementation will be consistent with the vision statement**.
- The process definition step consists of two elements—one is to define **processes for demand management, planning and scheduling** while the other element **addresses the finance and accounting side**.
- The **ERP project schedule** is the basic control tool used to manage the project to a timely and successful conclusion.
- A few **key policy statements** are required for the successful operation of enterprise resource planning.
- Five bedrock policies are the ones that address **sales and operations planning, demand management, master scheduling, material planning and engineering change**.
