How To Write A Dysphagia Report:

A Guide to Clinical Assessment and Professional Report Writing in Speech-Language Pathology Renee Fabus, 2024-06-01

Learning to assess speech and language disorders and write diagnostic reports may be an overwhelming experience especially when most texts don't cover both topics at once. With that in mind, A Guide to Clinical Assessment and Professional Report Writing in Speech Language Pathology Second Edition combines the latest assessment protocols and diagnostic techniques with vital diagnostic report writing tools into a single definitive guide. Cyndi Stein, Rubin, Renee Fabus, and their contributors recognize that clinical assessment is inextricably linked to report writing and have updated this Second Edition to synthesize the two. Following the introductory chapters which discuss the basics of assessment and report writing, each subsequent chapter focuses on a particular disorder, provides in-depth assessment tools, and presents a corresponding sample report. Key Features: An inventory and explanation of formal and informal assessment measures; A glossary of key vocabulary; Sample case histories with assessment tools; Relevant and useful interview questions; Each disorder's background and characteristics; Assessment parameters; A differential diagnosis section; A model report. The accessible format of A Guide to Clinical Assessment and Professional Report Writing in Speech Language Pathology Second Edition will help students learn how to assess and document speech and language disorders and will also make for a perfect reference for them as clinicians for years to come.

New approaches to evaluation and management of dysphagia in neurological disease Masahiro Nakamori, Omar Ortega Fernández, Jun Kayashita, Mineka Yoshikawa, 2024-08-26

Neurological diseases tend to cause dysphagia, which can lead to aspiration pneumonia, influencing patient mortality and morbidity and increase the cost of medical care. Thus, it is essential to implement better evaluation, intervention, and rehabilitation for dysphagia. Many protocols and tools for assessing dysphagia, including aspiration, have been developed. Videofluoroscopic and videoendoscopic examinations are the current gold standard for assessing dysphagia. In addition, novel methods and instruments have been developed, which are non-invasive and simple to implement. As for clinical intervention, several effective rehabilitation protocols, as well as traditional methods, have been utilized. Moreover, novel machines such as transcranial magnetic stimulation, transcranial direct current stimulation, and transcutaneous electrical stimulation of the neck are being introduced and are expected to improve neuromuscular function.
