Minimax Under Transportation Constraints Vladimir Tsurkov, A. Mironov, 2013-11-21 Transportation problems belong to the domains mathematical programming and operations research Transportation models are widely applied in various fields Numerous concrete problems for example assignment and distribution problems maximum flow problem etc are formulated as transportation problems Some efficient methods have been developed for solving transportation problems of various types This monograph is devoted to transportation problems with minimax criteria The classical linear transportation problem was posed several decades ago In this problem supply and demand points are given and it is required to minimize the transportation cost This statement paved the way for numerous extensions and generalizations In contrast to the original statement of the problem we consider a minimax rather than a minimum criterion In particular a matrix with the minimal largest element is sought in the class of nonnegative matrices with given sums of row and column elements In this case the idea behind the minimax criterion can be interpreted as follows Suppose that the shipment time from a supply point to a demand point is proportional to the amount to be shipped Then the minimax is the minimal time required to transport the total amount It is a common situation that the decision maker does not know the tariff coefficients In other situations they do not have any meaning at all and neither do

nonlinear tariff objective functions In such cases the minimax interpretation leads to an effective solution

Introduction To Algorithms Thomas H Cormen, Charles E Leiserson, Ronald L Rivest, Clifford Stein, 2001 An extensively revised edition of a mathematically rigorous yet accessible introduction to algorithms

A Reformulation-Linearization Technique for Solving Discrete and Continuous Nonconvex Problems Hanif D. Sherali, W. P. Adams, 2013-04-17 This book deals with the theory and applications of the Reformulation Linearization Convexification Technique RL T for solving nonconvex optimization problems A unified treatment of discrete and continuous nonconvex programming problems is presented using this approach In essence the bridge between these two types of nonconvexities is made via a polynomial representation of discrete constraints For example the binariness on a 0 1 variable x can be equivalently expressed as the polynomial constraint $x^2 - x = 0$ The motivation for this book is the role of tight linear convex programming representations or relaxations in solving such discrete and continuous nonconvex programming problems The principal thrust is to commence with a model that affords a useful representation and structure and then to further strengthen this representation through automatic reformulation and constraint generation techniques As mentioned above the focal point of this book is the development and application of RL T for use as an automatic reformulation procedure and also to generate strong valid inequalities The RLT operates in two phases In the Reformulation Phase certain types of additional implied polynomial constraints that include the aforementioned constraints in the case of binary variables are appended to the problem The resulting problem is subsequently linearized except that certain convex constraints are sometimes retained in particular special cases in the Linearization Convexification Phase This is done via the definition of

suitable new variables to replace each distinct variable product term The higher dimensional representation yields a linear or convex programming relaxation

3D Video Laurent Lucas, Céline Loscos, Yannick Rémion, 2013-12-04 While 3D vision has existed for many years the use of 3D cameras and video based modeling by the film industry has induced an explosion of interest for 3D acquisition technology 3D content and 3D displays As such 3D video has become one of the new technology trends of this century The chapters in this book cover a large spectrum of areas connected to 3D video which are presented both theoretically and technologically while taking into account both physiological and perceptual aspects Stepping away from traditional 3D vision the authors all currently involved in these areas provide the necessary elements for understanding the underlying computer based science of these technologies They consider applications and perspectives previously unexplored due to technological limitations This book guides the reader through the production process of 3D videos from acquisition through data treatment and representation to 3D diffusion Several types of camera systems are considered multiscopic or multiview which lead to different acquisition modeling and storage rendering solutions The application of these systems is also discussed to illustrate varying performance benefits making this book suitable for students academics and also those involved in the film industry

The Rigid Airship Ernest Henry Lewitt, 1925

Subsea Pipelines and Risers Yong Bai, Qiang Bai, 2005-12-05 Marine pipelines for the transportation of oil and gas have become a safe and reliable part of the expanding infrastructure put in place for the development of the valuable resources below the world's seas and oceans The design of these pipelines is a relatively new technology and continues to evolve as the design of more cost effective pipelines becomes a priority and applications move into deeper waters and more hostile environments This updated edition of a best selling title provides the reader with a scope and depth of detail related to the design of offshore pipelines and risers not seen before in a textbook format With over 25 years experience Professor Yong Bai has been able to assimilate the essence of the applied mechanics aspects of offshore pipeline system design in a form of value to students and designers alike It represents an excellent source of up to date practices and knowledge to help equip those who wish to be part of the exciting future of this industry

The Oxford Guide

to Financial Modeling Thomas S. Y. Ho, Sang Bin Lee, 2004-01-15 The essential premise of this book is that theory and practice are equally important in describing financial modeling In it the authors try to strike a balance in their discussions between theories that provide foundations for financial models and the institutional details that provide the context for applications of the models The book presents the financial models of stock and bond options exotic options investment grade and high yield bonds convertible bonds mortgage backed securities liabilities of financial institutions the business model and the corporate model It also describes the applications of the models to corporate finance Furthermore it relates the models to financial statements risk management for an enterprise and asset liability management with illiquid instruments The financial models are progressively presented from option pricing in the securities markets to firm valuation in corporate finance following a format to emphasize the three aspects of a model the set of assumptions the model specification and the model applications Generally financial modeling books segment the world of finance as investments financial institutions corporate finance and securities analysis and in so doing they rarely emphasize the relationships between the subjects This unique book successfully ties the thought processes and applications of the financial models together and describes them as one process that provides business solutions Created as a companion website to the book readers can visit www.thomasho.com to gain deeper understanding of the book's financial models Interested readers can build and test the models described in the book using Excel and they can submit their models to the site Readers can also use the site's forum to discuss the models and can browse server based models to gain insights into the applications of the models For those using the book in meetings or class settings the site provides Power Point descriptions of the chapters Students can use available question banks on the chapters for studying
