- 01 The greatest enemy threat?     
- 02 But really, everything else gets worse     
- 03 So, we're not alone here, right?     
- 04 They're gonna come today, come come come, come come come

- Abstract** The purpose of this study was to determine whether there were differences in the prevalence of risk factors for coronary artery disease between two groups of men who had been exposed to asbestos during their lifetime. One group consisted of 60 men who had worked in an asbestos-related occupation and the other group consisted of 60 men who had never worked in such an occupation. The results showed that the prevalence of risk factors for coronary artery disease was significantly higher in the group of men who had worked in an asbestos-related occupation than in the group of men who had never worked in such an occupation.
