Acehnese Language and Society: Language and Linguistics Maya Safhida, dkk, 2022-10-27 Indonesia is a pluralistic nation consisting of various ethnic groups throughout the country. Each tribe has its own language to communicate both among ethnic and inter ethnic groups. Language has an important role as a means of communication for humans to convey their intentions and ideas and express themselves in interactions in society. The Acehnese language is one of the regional languages in Aceh Province, one of the provinces out of 37 provinces in Indonesia. This language is one of the languages with the largest number of speakers in the province. It dominates in the acquisition of the language of the people in Aceh. However, until now few people know about the fundamentals of the Acehnese language. Structurally, the Acehnese language has many unique features. One of its uniqueness is the phonological aspect or the sound of the language. The Acehnese language has a higher number of phonemes when compared to other regional languages in Aceh, even Indonesian. Another of its uniqueness, for example, is in the aspect of vocabulary and how some word differences are seen in the varieties of Acehnese spoken throughout the province, country, and even those speakers who reside in other countries. There are also many social factors in Acehnese society that affect the meaning of a particular word or phrase in this language. Therefore, we had invited researchers and practitioners to contribute to writing the book *The Acehnese Language and Society* as part of the Universitas Syiah Kuala Press Book Series *Language and Linguistics*.

Soccer and the American Dream Ian Lawrence, 2018-11-12 The American Dream is founded upon the ideological belief that you can be anything you want to be regardless of your current class position and is one of the most emotive, pervasive, and ideologically embedded concepts championed by American citizens. Providing contemporary insight into the American Dream via the critical lens of soccer, the world's pre-eminent sport but still a minority interest in the US, this book challenges the notion that America is different, exceptional, or unique in the global order, either in real socio-economic-political terms or in perceived cultural terms. Soccer and the American Dream offers an overview of soccer in the US and uses case studies to explore the motives of American university students in undertaking a soccer scholarship, considering the impact of family, social class, and career development upon social mobility and upon the game itself. Providing a fascinating new insight into the nexus of sport, education, culture, and society, this is a topical resource for students, scholars, and practitioners across the fields of soccer, higher education, youth sport, sports development, sports coaching, and sport management.

Family Communication about Genetics Clara L. Gaff, Carma L. Bylund, 2010-07-01 Genetics is in all senses a family affair. The diagnosis of a genetic condition affects not only the patient and biological family members who may themselves be at risk but also family more generally as support may be sought from those considered kin and who may or may not be at risk themselves. It is considered best practice in genetic consultations to explore who will be informed within the family when a genetic condition or risk is diagnosed, particularly when the health of other family members is at risk. There is little guidance or consensus on how to achieve the implicit goal of informed family members while respecting patient confidentiality, however. There is a need for practitioners to be aware of

the dynamics of family communication and to have guidance about how they may sensitively facilitate communication about genetics within families This handbook facilitates the development of clinical practices relating to family communication about genetics Relevant theories of family communication are summarized and related to a clinical genetics milieu and from this frameworks for practitioners are presented A book of this nature is particularly timely as the completion of the Human Genome Project will result in an unprecedented amount of information about genetic constitution and health risks becoming available to individuals and their families The presence of a potential genetic condition in a family is not a new phenomenon However the growth in testing for genetic conditions common complex conditions and variants that may influence health as well as drug metabolism means that a greater number of individuals will face decisions about communicating this information to their relatives Many health professionals in all levels of health care will be confronted with issues of responsibility and practice in family communication about genetic information as they become providers of this testing

Sensitive Teacher Education Yolanda Gayol Ramírez, Patricia Rosas Chávez, Peter Smagorinsky, 2020-09-17 Shortlisted for the UK Literacy Association s Academic Book Award 2021 This volume explores the literacy education master s degree program developed at Universidad de Guadalajara in Jalisco Mexico with the aim of addressing the nation s emerging social economic technological and political needs Developing the program required taking into account the cultural diversity historical economic disparities indigenous and colonial cultures and power inequities of the Mexican nation These conditions have produced economic structures that maintain the status quo that concentrates wealth and opportunity in the hands of the very few creating challenges for the education and economic life for the majority of the population The program advocates providing tools for youth to critique and change their surroundings while also learning the codes of power that provide them a repertoire of navigational means for producing satisfying lives Rather than arguing that the program can be replicated or taken to scale in different contexts the editors focus on how their process of looking inward to consider Mexican

cultures enabled them to develop an appropriate educational program to address Mexico's historically low literacy rates. They show that if all teaching and learning is context dependent then focusing on the process of program development rather than on the outcomes that may or may not be easily applied to other settings is appropriate for global educators seeking to provide literacy teacher education grounded in national concerns and challenges. The volume provides a process model for developing an organic program designed to address needs in a national context especially one grounded in both colonial and heritage cultures and one in which literacy is understood as a tool for social critique, redress, advancement and equity. *The Language of Inclusive Education* Elizabeth Walton, 2015-12-22. The Language of Inclusive Education is an insightful text which considers the writing, speaking, reading and hearing of inclusive education. Based on the premise that humans use language to construct their worlds and their realities, this book is concerned with how language works to determine what we know and understand about issues related to inclusion in education. Using a variety of analytical tools, the author exposes language at work in academic and popular literature and in policy documents. Areas of focus include: What inclusive education means and how it is defined; How metaphor works to position inclusive education; How textbooks construct inclusive education; How we use language to build what we understand to be difference and disability with particular reference to ADHD and Asperger's Syndrome; Listening to children and young people as a means to promote inclusion in schools. Woven through this volume is the argument for a more critical awareness of how we use language in the field that we call inclusive education. This book is a must read for any individual studying, practicing or with an interest in inclusion and exploring the associations with language. Primer on Decision Making James G. March, 1994-05-23. Building on lecture notes from his acclaimed course at Stanford University, James March provides a brilliant introduction to decision making, a central human activity fundamental to individual, group, organizational and societal life. March draws on research from all the disciplines of social and behavioral science to show decision making in its broadest context. By emphasizing how decisions are actually made as opposed to how they should be made, he enables those involved in the process to understand it both as observers and as participants. March sheds new light on the decision making process by delineating four deep issues that persistently divide students of decision making: Are decisions based on rational choices involving preferences and expected consequences or on rules that are appropriate to the identity of the decision maker and the situation? Is decision making a consistent, clear process or one characterized by ambiguity and inconsistency? Is decision making significant primarily for its outcomes or for the individual and social meanings it creates and sustains? And finally, are the outcomes of decision processes attributable solely to the actions of individuals or to the combined influence of interacting individuals, organizations and societies? March's observations on how intelligence is or is not achieved through decision making and possibilities for enhancing decision intelligence are also provided. March explains key concepts of vital importance to students of decision making and decision makers such as limited rationality, history dependent rules and ambiguity and weaves these ideas into a

full depiction of decision making He includes a discussion of the modern aspects of several classic issues underlying these concepts such as the relation between reason and ignorance intentionality and fate and meaning and interpretation This valuable textbook by one of the seminal figures in the history of organizational decision making will be required reading for a new generation of scholars managers and other decision makers

Grounding Cognition Diane Pecher,Rolf A. Zwaan,2005-01-10 One of the key questions in cognitive psychology is how people represent knowledge about concepts such as football or love Some researchers have proposed that concepts are represented in human memory by the sensorimotor systems that underlie interaction with the outside world These theories represent developments in cognitive science to view cognition no longer in terms of abstract information processing but in terms of perception and action In other words cognition is grounded in embodied experiences Studies show that

sensory perception and motor actions support understanding of words and object concepts Moreover even understanding of abstract and emotion concepts can be shown to rely on more concrete embodied experiences Finally language itself can be shown to be grounded in sensorimotor processes This book brings together theoretical arguments and empirical evidence from several key researchers in this field to support this framework **Read, Reason, Write** Dorothy U.
