Still Life Fernando Domínguez Rubio, 2020-08-20 How do you keep the cracks in Starry Night from spreading How do you prevent artworks made of hugs or candies from disappearing How do you render a fading photograph eternal or should you attempt it at all These are some of the questions that conservators curators registrars and exhibition designers dealing with contemporary art face on a daily basis In Still Life Fernando Domínguez Rubio delves into one of the most important museums of the world the Museum of Modern Art MoMA in New York to explore the day to day dilemmas that museum workers face when the immortal artworks that we see in the exhibition room reveal themselves to be slowly unfolding disasters Still Life offers a fascinating and detailed ethnographic account of what it takes to prevent these disasters from happening Going behind the scenes at MoMA Domínguez Rubio provides a rare view of the vast technological apparatus from climatic infrastructures and storage facilities to conservation labs and machine rooms and teams of workers from conservators and engineers to guards and couriers who fight to hold artworks still As MoMA reopens after a massive expansion and rearranging of its space and collections Still Life not only offers a much needed account of the spaces actors and forms of labor traditionally left out of the main narratives of art but it also offers a timely meditation on how far we as a society are willing to go to keep the things we value from disappearing into oblivion

The Baroque in Architectural Culture, 1880-1980 Andrew Leach, John Macarthur, 2016-03-09 In his landmark volume Space Time and Architecture Sigfried Giedion paired images of two iconic spirals Tatlin's Monument to the Third International and Borromini's dome for Sant Ivo alla Sapienza The values shared between the baroque age and the modern were thus encapsulated on a single page spread As Giedion put it writing of Sant Ivo Borromini accomplished the movement of the whole pattern from the ground to the lantern without entirely ending even there And yet he merely groped towards that which could be completely effected in modern architecture achieving the transition between inner and outer space The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture of earlier epochs is now widely acknowledged This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism Presenting research by an international community of scholars this book explores through a series of cross sections the traffic of ideas

between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history In doing so the volume defines a role for the baroque in the history of architectural historiography and in the history of modern architectural culture *Architecture* Francis D. The Ambiguous Legacy of Socialist Modernist Architecture in Central and Eastern Europe Mariusz Sokołowicz,Aleksandra Nowakowska,Błażej Ciarkowski,2023-04-28 This book examines the unique socialist modernist architecture built in the twentieth century in Central and Eastern Europe as a source of heritage and of existing and potential value for the present and future generations Due to the historical context in which it was created such architecture remains ambiguous On the one hand the wider public associates it with the legacy of the unpleasant period of the real socialist economic regime Yet on the other hand it is also a manifestation of social modernization and the promotion of a significant proportion of the population This book focuses particularly on concrete heritage a legacy of modernist architecture in Central and Eastern Europe and it was this material that enabled their rebuilding after World War II and modernization during the following decades The authors search for the value of modernist architecture and using case studies from Poland Bulgaria Northern Macedonia Lithuania and Slovenia verify to what extent this heritage is embedded in the local socio economic milieu and becomes a basis for creating new values They argue that the challenge is to change the ways we think about heritage from looking at it from the point of view of a single monument to thinking in terms of a place with its own character and identity that builds its relation to history and its embeddedness in the local space Furthermore they propose that the preservation of existing concrete structures and adapting them to modern needs is of great importance for sustainability With increasing awareness of the issue of preserving post war architectural heritage and the strategies of dissonant heritage management this multidisciplinary study will be of interest to architecture historians conservators heritage economists urban planners and architects

Prospects for an Ethics of Architecture William M. Taylor,Michael P. Levine,2012-12-06 Bringing together the reflections of an architectural theorist and a philosopher this book encourages philosophers and architects scholars and designers alike to reconsider what they do as well as what they can do in the face of

challenging times It does so by exploring the notion that architecture and design can and possibly should in their own right make for a distinctive form of ethical investigation The book is less concerned with absolutist understandings of the two components of ethics a theory of the good and a theory of the right than with remaining open to multiple relations between ideas about the built environment design practices and the plurality of kinds of human subjects inhabitants individuals and communities accommodated by buildings and urban spaces The built environment contributes to the inculcation of all sorts of values good and bad Thus this book aims to change the way people commonly think about ethics not only in relation to the built environment but to themselves their ways of thinking and modes of behaviour
