

Student Exploration: Identifying Nutrients

Vocabulary: carbohydrate, disaccharide, lipid, monosaccharide, polysaccharide, protein, starch

Gizmo Warm-up

Have you ever wondered what is in your food? Scientists use a variety of tests to determine the nutritional content of food. You will learn four of those tests with the *Identifying Nutrients* Gizmo.

- Below the **Food samples** label, drag tube **A** into the **Food sample holder**. Below the **Benedict test**, click the **Test** button. What is done in the Benedict test?

Is used to test the presence of monosaccharides.

- The Benedict test is a test for **monosaccharides**; simple sugars like glucose or fructose (fruit sugar). In contact with monosaccharides, the Benedict solution turns from blue to green to orange.

Does **Sample A** contain monosaccharides? Yes

Note: **Disaccharides** such as sucrose (table sugar) and lactose (milk sugar) are more complex than monosaccharides. The Benedict test does not detect disaccharides directly.

Activity A:
Identifying nutrients

Get the Gizmo ready:

- Click **Reset**.
- Drag **Sample A** into the **Food sample holder**.

Introduction: Most food is composed of three types of molecules: **carbohydrates**, **proteins**, and **lipids**.

- Carbohydrates such as **starches** and sugars are major source of energy. Simple sugars are found in sweets and fruits. Starches are found in potatoes, cereal, pasta, flour, and other plant products.
- Proteins are used in body structures such as muscles, skin, and hair. Rich sources of proteins include meats, dairy products, and beans.
- Lipids (fats and oils) are used for energy, insulation, and as an essential building block of cells. Meats, dairy products, and oily plants such as olives are rich in lipids.

Imputing nutrient intake from foods prepared and consumed away from home and other composite foods, 2017-01-06 This paper assesses the Subramanian and Deaton S D approach for imputing the caloric intake of households from food prepared away from home FAFH and composite foods CF by juxtaposing it with the imputations of alternative approaches and extends these approaches to four additional nutrients vitamin A iron zinc and calcium The apparent relative nutritional insignificance of FAFH and CF in Bangladesh obfuscates our efforts to assess alternatives to the S D approach to imputation and we remain uncertain about the relative value of the alternative imputation approaches examined FAFH and CF although widely consumed in Bangladesh constitute a relatively unimportant source of nutrients regardless of how the nutrient content of FAFH and CF is imputed

Redesigning the Process for Establishing the Dietary Guidelines for Americans National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Committee to Review the Process to Update the Dietary Guidelines for Americans, 2017-12-16 What foods should Americans eat to promote their health and in what amounts What is the scientific evidence that supports specific recommendations for dietary intake to reduce the risk of multifactorial chronic disease These questions are critically important because dietary intake has been recognized to have a role as a key determinant of health As the primary federal source of consistent evidence based information on dietary practices for optimal nutrition the Dietary Guidelines for Americans DGA have the promise to empower Americans to make informed decisions about what and how much they eat to improve health and reduce the risk of chronic disease The adoption and widespread translation of the DGA requires that they be universally viewed as valid evidence based and free of bias and conflicts of interest to the extent possible However this has not routinely been the case A first short report meant to inform the 2020 review cycle explored how the advisory committee selection process can be improved to provide more transparency eliminate bias and include committee members

with a range of viewpoints This second and final report recommends changes to the DGA process to reduce and manage sources of bias and conflicts of interest improve timely opportunities for engagement by all interested parties enhance transparency and strengthen the science base of the process

Next Generation Food Crops for Human Health

Sangam L. Dwivedi,Rodomiro Ortiz,Chittaranjan Kole,2025-09-26 As the global population surges the challenge of feeding the world becomes increasingly urgent Meeting this demand requires doubling crop yields and delivering safe nutritious and affordable food but current agricultural practices fall short in combating malnutrition climate change impacts and the decline in food diversity Next Generation Food Crops for Human Health delves into the advances in genetic and genomic research that are revolutionizing the development of productive nutrient dense food crops It presents insights into tools including high throughput phenomics DNA sequencing and genomic selection which enable scientists to discover functionally characterized genes and enhance staple crops such as grains legumes fruits vegetables and oil crops By leveraging these technologies researchers are creating a new generation of foods that optimize essential nutrients from complex carbohydrates and proteins to vitamins and bioactive compounds A volume in the Nextgen Agriculture Novel Concepts and Innovative Strategies series this book is valuable to graduate and postgraduate students postdoctoral researchers and policymakers working toward improving nutritional security worldwide
