a Roman numeral an alphabetic character and an Arabic numeral This designation constitutes the classification symbol based
on the system in Mineralogische Tabellen by Hugo Strunz a summary is shown in Appendix A The Roman numeral and
alphabetical character divide the minerals into broad groups based mainly on chemistry with the silicate subdivision based
on silicate polymerization The Arabic numeral specifies the group to which a particular mineral belongs a group is defined
mainly on the basis of crystallographic similarities but minerals with similar chemical compositions are sometimes included
in the group even though they do not exhibit crystallographic affinities with other members of the class The next entry gives
the name of the author of the mineral and the date of its introduction into the literature In some cases where a mineral has
been redescribed or the name has been changed from the original this entry will reflect the person and time when this was
done This is followed by a reference to what we have tried to make the latest or most authoritative literature report We have
attempted to include at least one reference for each species If there is a second reference following the first it will be a
reference to the determination of the crystal structure The abbreviations used in the references are given in Appendix B The
final entry when present gives the names of similar or related minerals and is preceded by the designation See also
