The Geography of Contemporary China Jing'ai Wang, Shunlin Liang, Peijun Shi, 2022-06-28 This textbook provides a comprehensive and very detailed insight into Chinese Contemporary Geography in English. It documents the geographical issues associated with China's rapid growth. Since initiating the reforms and open policy, China has achieved tremendous success. China's rapid growth is now a driving force in the global economy and is achieving unprecedented rates of poverty reduction. However, China also faces a number of sustainability and emerging challenges associated with rapid growth, such as growing regional disparities in terms of per capita income and social economic development, sustainable resource development, and issues related to regional and global economic integration. In addition, rapid economic growth has also brought about major challenges such as resource shortages, ecological and environmental destruction, land degradation, and frequent disasters. This book presents the authors' reflections. This lavishly illustrated book covers physical geography, history, and economic and political systems of the world's most populous country. The major focus is on geographical issues in China's contemporary development, agriculture, population, urbanization, resource and energy, and environment. The lead author of the book has taught relevant courses in China for three decades and authored and edited multiple textbooks for Chinese students. This book will appeal to undergraduate students of geography and related disciplines with a regional focus on China and to the general reader who wants to learn different geographical aspects of modern China with little academic background in geography.

The Knowledge Gap Natalie Wexler, 2019-08-06 Essential reading for teachers, education administrators, and policymakers alike. STARRED Library Journal. The untold story of the root cause of America's education crisis. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension skills at the expense of actual knowledge. In the tradition of Dale Russakoff's *The*

Prize and Dana Goldstein's *The Teacher Wars* Wexler brings together history research and compelling characters to pull back the curtain on this fundamental flaw in our education system one that fellow reformers journalists and policymakers have long overlooked and of which the general public including many parents remains unaware But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong it also follows innovative educators who are in the process of shedding their deeply ingrained habits and describes the rewards that have come along students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed If we truly want to fix our education system and unlock the potential of our neediest children we have no choice but to pay attention

Assessment in Geographical Education: An International Perspective Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27 In recent years there has been increased attention paid to the importance of assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student's knowledge and skills

2013 even countries with historically low levels of income inequality have experienced significant increases over the past decade including Denmark Sweden and Germany The U N and the World Bank also emphasize the persistent nature of the problem It is not all bad news In March 2013 the Guardian newspaper reported Some of the poorest people in the world are becoming significantly less poor according to a groundbreaking academic study which has taken a new approach to measuring deprivation The report by Oxford University's poverty and human development initiative predicts that countries among the most impoverished in the world could see acute poverty eradicated within 20 years if they continue at present rates On the other hand the U N says environmental threats from climate change could push billions more into extreme poverty in coming decades All of these points lead to the need for a revised updated and expanded edition of the Encyclopedia of World Poverty Key Features 775 evaluated and updated and 175 entirely new entries New Reader's Guide categories Signed articles with cross references Further Readings will be accompanied by pedagogical elements Updated Chronology Resource Guide Glossary and thorough new Index The SAGE Encyclopedia of World Poverty Second Edition is a dependable source for students and researchers who are researching world poverty making it a must have reference for all academic libraries

Mental Maps Janne Holmén, Norbert Götz, 2021-11-28. The concept of mental maps is used in several disciplines including geography, psychology, history, linguistics, economics, anthropology, political science and computer game design. However, until now there has been little communication between these disciplines and methodological schools involved in mental mapping. *Mental Maps: Geographical and Historical Perspectives* addresses this situation by bringing together scholars from some of the related fields. Ute Schneider examines the development of German geographer Heinrich Schiffrers' mental maps using his books on Africa from the 1930s to the 1970s. Efrat Ben Ze'ev and Chloé Yvroux investigate conceptions of Israel and Palestine, particularly the West Bank, held by French and Israeli students. By superimposing large numbers of sketch maps, Clarisse Didelon, Loiseau Sophie de Ruffray and Nicolas Lambert identify soft and hard macro regions on the mental maps of geography students across the world. Janne Holmén investigates whether the Baltic and the Mediterranean Seas are seen as links or divisions between the countries that line their shores according to the mental maps of high school seniors. Similarly, Dario Musolino maps regional preferences of Italian entrepreneurs. Finally, Lars Erik Edlund offers an essayistic account of mental mapping based on memories of maps in his own family. This edited volume book uses printed maps, survey data and

hand drawn maps as sources contributing to the study of human perception of space from the perspectives of different disciplines The chapters in this book were originally published as a special issue of the Journal of Cultural Geography
