Inquiry-Based Science Education Geraldo W. Rocha Fernandes, António M. Rodrigues, Carlos Alberto Rosa Ferreira, 2019-05-21 This book analyzes the main Information and Communication Technologies ICT used in science education and the main theoretical approaches that support science education mediated by ICT in order to show how digital technologies can be employed in Inquiry Based Science Education It presents the results of a comprehensive review of studies focusing both on the use and effects of digital technologies in science education and on the different theoretical approaches that support the use of ICTs in science teaching By doing so the book provides a useful summary of the current research in the field and a strong analysis of its limitations It concludes that there are few studies that report strategies and didactics for the practical use of ICT in science classes and that the use of ICT in science education can't be seen as an isolated action without a theoretical basis to support it Based on these conclusions the volume identifies the main ICTs used in inquiry activities the main steps in inquiry activities used in science education and their approaches to the use of ICT It shows that the use of ICT in Inquiry Based Science Education allows students to develop more active work styles improved attitudes towards science better conceptual and theoretical understanding improved reasoning better modelling capabilities and improved teamwork along with improvements in other abilities Using ICT in Inquiry Based Science Education will be a valuable resource for science teachers and science teacher educators looking for an introductory text that presents an overview of the scientific research analyzing the implementation of digital technologies in science teaching and that provides useful insights to all educators interested in using digital technologies to introduce their students in the world of scientific inquiry and research Christopher Nolan Darren Mooney, 2018-10-10 Christopher Nolan is one of the defining directors of the 21st century Few of his contemporaries can compete in terms of critical and commercial success let alone cultural impact His films have a rare ability to transcend audience expectations appealing to both casual moviegoers and dyed in the wool cineastes Nolan's work ranges from gritty crime thrillers Memento Insomnia to spectacular blockbusters the Dark Knight trilogy Inception They have taken audiences from the depths of space Interstellar to the harsh realities of war Dunkirk And they have pushed the boundaries of the possible in modern movie making This critical history covers his complete filmography tracing his career from film student to indie darling to Oscar nominated auteur **Place, Not Race** Sheryll Cashin, 2014-05-06 From a nationally recognized expert a fresh and original argument for bettering affirmative action Race

based affirmative action had been declining as a factor in university admissions even before the recent spate of related cases arrived at the Supreme Court Since Ward Connerly kickstarted a state by state political mobilization against affirmative action in the mid 1990s the percentage of four year public colleges that consider racial or ethnic status in admissions has fallen from 60 percent to 35 percent Only 45 percent of private colleges still explicitly consider race with elite schools more likely to do so although they too have retreated For law professor and civil rights activist Sheryll Cashin this isn't entirely bad news because as she argues affirmative action as currently practiced does little to help disadvantaged people The truly disadvantaged black and brown children trapped in high poverty environs are not getting the quality schooling they need in part because backlash and wedge politics undermine any possibility for common sense public policies Using place instead of race in diversity programming she writes will better amend the structural disadvantages endured by many children of color while enhancing the possibility that we might one day move past the racial resentment that affirmative action engenders In *Place Not Race* Cashin reimagines affirmative action and champions place based policies arguing that college applicants who have thrived despite exposure to neighborhood or school poverty are deserving of special consideration Those blessed to have come of age in poverty free havens are not Sixty years since the historic decision we're undoubtedly far from meeting the promise of *Brown v Board of Education* but Cashin offers a new framework for true inclusion for the millions of children who live separate and unequal lives Her proposals include making standardized tests optional replacing merit based financial aid with need based financial aid and recruiting high achieving students from overlooked places among other steps that encourage cross racial alliances and social mobility A call for action toward the long overdue promise of equality *Place Not Race* persuasively shows how the social costs of racial preferences actually outweigh any of the marginal benefits when effective race neutral alternatives are available

Effective and Equitable Teacher Practice in Mathematics and Science Education Nani Teig, Trude Nilsen, Kajsa Yang Hansen, 2024-03-19 This open access book presents original research on effective and equitable teacher practice in mathematics and science education across Nordic countries It focuses on three key aspects of teacher practice what teachers teach how teachers teach and how teachers assess their students To provide a

comprehensive understanding of teacher practice data from the IEA's Trends in Mathematics and Science Study TIMSS from 2011 to 2019 was analyzed TIMSS provides large scale and representative data allowing an in depth investigation of the relations between teachers their practices and student outcomes The findings highlight the changes in teacher practice over time and the extent to which such changes explain the differences in student outcomes This research also contributes to understanding how the relationships between teacher practice and student outcomes vary across different student groups i.e. gender socioeconomic status and language background The empirical evidence presented not only adds a significant layer to the academic discourse but also offers practical implications These insights are crucial in facilitating educational policymaking and classroom practices aimed at improving student outcomes and closing gaps in educational inequality

Being and Becoming Scientists Today Susan A. Kirch, Michele Amoroso, 2016-02-10 Can I contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In **Being and Becoming Scientists Today** the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives
