Concerning Semi-Automated Vehicles Francesca Favaro,2020-02-28 Across the span of the SAE International defined Levels of Driving Automation human drivers occupy a diverse range of responsibilities and authority on the vehicle movement and the monitoring of the outside environment From both a technological and a regulatory perspective there is a gap that divides lower levels of automation L1 through L3 and higher levels of automation L4 and L5 For those vehicles that require the cooperation between a human driver and the autonomous technology it is important to ascertain the safety consequences

of such a design choice It is also important to understand what the transition between automated driving and manual driving entails for the human driver as well as for the surrounding traffic This SAE EDGE Research Report investigates unsettled issues concerning what is commonly referred to as semi automation including an overview of the role of human drivers the quantification of the transition to manual problem the role played by L3 toward full automation and regulatory and moral considerations surrounding the deployment of these vehicles NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click [here](https://doi.org/10.4271/EPR2020001) to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020001>
