

Computer maintenance

Is the practice of keeping computers in a good state of repair. A computer containing accumulated dust and debris may not run properly.

Dust and debris will accumulate as a result of air cooling. Any filters used to mitigate this need regular service and changes. If the [cooling system](#) is not filtered then regular computer cleaning may prevent short circuits and overheating.

Keyboard[\[edit\]](#)

The crumbs, dust, and other particulate that fall between the keys and build up underneath are loosened by spraying pressurized air into the keyboard, then removed with a low-pressure vacuum cleaner. A plastic-cleaning agent applied to the surface of the keys with a cloth is used to remove the accumulation of oil and dirt from repeated contact with a user's fingertips. If this is not sufficient for a more severely dirty keyboard, keys are physically removed for more focused individual cleaning, or for better access to the area beneath. Finally, the surface is wiped with a disinfectant.

Pc maintenance

Monitor[\[edit\]](#)

A monitor displays information in visual form, using text and graphics. The portion of the monitor that displays the information is called the screen. Like a television screen, a computer screen can show still or moving pictures and it's a part of Output Devices.

Mouse[\[edit\]](#)

The top surface of the mouse is wiped with a plastic cleanser to remove the dirt that accumulates from contact with the hand, as on the keyboard. The bottom surface is also cleaned to ensure that it can slide freely. If it is a [mechanical mouse](#), the trackball is taken out, not only to clean the ball itself, but to scrape dirt from the runners that sense the ball's movement and can become jittery or stuck if impeded by grime.

Tower/desktop unit[\[edit\]](#)

Internal components accumulate dust brought in by the airflow maintained by fans to keep the PC from overheating. A soft brush may remove loose dirt; the remainder is dislodged with compressed air and removed with a low-pressure vacuum. The case is wiped down with a cleaning agent. A pressurized blower or [gas duster](#) can remove dust that cannot be reached with a brush.^[a]

Software Reliability Handbook Rook, 1990-03-31 The reliability of software is becoming increasingly important to a large range of industries that rely on complex computer systems and machinery with computer control The reliability of a system depends on both the hardware and the software that comprise the system Although faults in design can continue to give problems the issues and the techniques for meeting severe reliability requirements in hardware have been understood for some time In the case of software both the techniques

and a positive attitude of software developers to the achievement of reliability are much less well established They are particularly crucial in the development of software dependent safety critical systems

Repairing and Querying Databases under Aggregate Constraints Sergio Flesca,Filippo Furfaro,Francesco Parisi,2011-10-20 Research has deeply investigated several issues related to the use of integrity constraints on relational databases In particular a great deal of attention has been devoted to the problem of extracting reliable information from databases containing pieces of information inconsistent with regard to some integrity constraints In this manuscript the problem of extracting consistent information from relational databases violating integrity constraints on numerical data is addressed Aggregate constraints defined as linear inequalities on aggregate sum queries on input data are considered The notion of repair as consistent set of updates at attribute value level is exploited and the characterization of several data complexity issues related to repairing data and computing consistent query answers is provided Moreover a method for computing reasonable repairs of inconsistent numerical databases is introduced for a restricted but expressive class of aggregate constraints An extension of this method for dealing with the data repairing problem in the presence of weak aggregate constraints which are expected to be satisfied but not required to is presented Furthermore a technique for computing consistent answers of aggregate queries in the presence of a wide form of aggregate constraints is provided Finally extensions of the framework as well as several open problems are discussed
