Maths Predicted Paper June 2015:

Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives Kinga

Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19

Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content. The negative consequences of mathematical anxiety are well documented. Students with high levels of mathematical anxiety might underperform in important test situations; they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities. Although at the university level many students do not continue to study mathematics, social science students are confronted with the fact that their disciplines involve learning about statistics, another potential source of anxiety for students who are uncomfortable with dealing with numerical content. Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational, developmental, cognitive, social and neuroscience researchers. The current collection of papers demonstrates the diversity of the field, offering both new empirical contributions and reviews of existing studies. The contributors also outline future directions for this line of research.

In other essays, Noson Yanofsky explores the inherent limits of knowledge in mathematical thinking, Jo Boaler and Lang Chen reveal why finger counting enhances children's receptivity to

The Emerging Discipline of Quantitative Systems Pharmacology Tarek A. Leil, Sergey Ermakov, 2015-09-07 In 2011 the National Institutes of Health NIH in collaboration with leaders from the pharmaceutical industry and the academic community published a white paper describing the emerging discipline of Quantitative Systems Pharmacology QSP and recommended the establishment of NIH supported interdisciplinary research and training programs for QSP QSP is still in its infancy but has tremendous potential to change the way we approach biomedical research QSP is really the integration of two disciplines that have been increasingly useful in biomedical research Systems Biology and Quantitative Pharmacology Systems Biology is the field of biomedical research that seeks to understand the relationships between genes and biologically active molecules to develop qualitative models of these systems and Quantitative Pharmacology is the field of biomedical research that seeks to use computer aided modeling and simulation to increase our understanding of the pharmacokinetics PK and pharmacodynamics PD of drugs and to aid in the design of pre clinical and clinical experiments The purpose of QSP modeling is to develop quantitative computer models of biological systems and disease processes and the effects of drug PK and PD on those systems QSP models allow testing of numerous potential experiments in silico to eliminate those associated with a low probability of success avoiding the potential costs of evaluating all of those failed experiments in the real world At the same time QSP models allow us to develop our understanding of the interaction between drugs and biological systems in a more

systematic and rigorous manner As the need to be more cost efficient in the use of research funding increases biomedical researchers will be required to gain the maximum insight from each experiment that is conducted This need is even more acute in the pharmaceutical industry where there is tremendous competition to develop innovative therapies in a highly regulated environment combined with very high research and development R a lack of adequate graduate training programs and the lack of support from government agencies that fund biomedical research However there is an active community of researchers in the pharmaceutical industry the academic community and government agencies that develop QSP and quantitative systems biology models and apply them both to better characterize and predict drug pharmacology and disease processes as well as to improve efficiency and productivity in pharmaceutical R D Causal Inference in Econometrics

Van-Nam Huynh,Vladik Kreinovich,Songsak Sriboonchitta,2015-12-28 This book is devoted to the analysis of causal inference which is one of the most difficult tasks in data analysis when two phenomena are observed to be related it is often difficult to decide whether one of them causally influences the other one or whether these two phenomena have a common cause This analysis is the main focus of this volume To get a good understanding of the causal inference it is important to have models of economic phenomena which are as accurate as possible Because of this need this volume also contains papers that use non traditional economic models such as fuzzy models and models obtained by using neural networks and data mining techniques It also contains papers that apply different econometric models to analyze real life economic dependencies
