Recent Stability Issues for Linear Dynamical Systems Nicola Guglielmi, Christian Lubich, Nicolas Gillis, Volker Mehrmann, Punit Sharma, Bart Vandereycken, 2024-12-13 This book concerns matrix nearness problems in the framework of spectral optimization It addresses some current research directions in spectral based stability studies for differential equations with material on ordinary differential equations ODEs differential algebraic equations and dynamical systems Here stability is interpreted in a broad sense which covers the need to develop stable and reliable algorithms preserving some qualitative properties of the computed solutions methodologies which are helpful to assess the onset of potential instabilities or loss of robustness and tools to determine the asymptotic properties of the solution or its discretization The topics considered include the computation of robustness measures for linear problems the use of low rank ODEs to approximate such measures via gradient systems the regularity stability passivity and controllability analysis of structured linear descriptor systems and the use of acceleration techniques to deal with some of the presented computational problems Although the emphasis is on the numerical study of differential equations and dynamical systems the book will also be of interest to researchers in matrix theory spectral optimization and spectral graph theory as well as in dynamical systems and systems theory

Methods of Signal Processing for Adaptive Antenna Arrays Larysa Titarenko, Alexander Barkalov, 2012-08-23 So far there does not

exist any theory of adaptive spatial signal processing ASSP for signals with uncertain parameters This monograph is devoted to the development of this theory which is very important in connection with wide spreading of telecommunications and radio links in the modern society This theory can be applied for the development of effective radio communications In the book some original approaches are proposed targeting the development of effective algorithms of ASSP with not exactly known parameters They include both probabilistic and deterministic approaches for synthesis of robust algorithms of ASSP The solution of problems also can be reduced to the construction of some operators for the Banach space which is presented in the book Methods of Signal Processing for Adaptive Antenna Arrays targets professionals students and PhD students in the area of telecommunications and should be useful for everybody connected with the new information technologies **Books in Print Supplement** ,2002 **Fundamentals of Structural Mechanics, Dynamics, and Stability** A.I.

Matrix Analysis and Applied Linear Algebra Carl Dean Meyer,2000 In this text Meyer mathematics North Carolina State U circumvents the traditional definition theorem proof format by focusing on applications He includes some of the more contemporary topics of applied linear algebra uses modern concepts and notation and accompanies theoretical developments with examples The eight chapters cover linear equations rectangular systems and echelon forms matrix algebra vector spaces determinants Eigenvalues and Eigenvectors Perron Frobenius theory and norms inner products and orthogonality The included CD ROM contains a searchable copy of the entire textbook and all solutions as well as detailed information on topics mentioned in examples references thumbnail sketches and photographs of mathematicians and a history of linear algebra and computing Annotation copyrighted by Book News Inc Portland OR *Mathematical Methods for Protein Structure Analysis and Design* Concettina Guerra,Sorin Istrail,2003-06-25 The papers collected in this volume reproduce contributions by leading sch arstoaninternationalschoolandworkshopwhichwasorganizedandheldwith thegoaloftakinga snapshotofadiscipline undertumultuous growth Indeed the area of protein folding docking and alignment is developing in response to needs for a mix of heterogeneous expertise spanning biology chemistry mathematics computer science and statistics among others Some of the problems encountered in this area are not only important for the scienti c challenges

they pose but also for the opportunities they disclose in terms of medical and industrial exploitation. A typical example is offered by protein drug interaction docking a problem posing daunting computational problems at the crossroads of geometry physics and chemistry and at the same time a problem with unimaginable implications for the pharmacopoeia of the future. The school focused on problems posed by the study of the mechanisms hindering protein folding and explored different ways of attacking these problems under objective evaluations of the methods. Together with a relatively small core of consolidated knowledge and tools important reflections were brought to this effort by studies in a multitude of directions and approaches. It is obviously impossible to predict which if any among these techniques will prove completely successful but it is precisely the implicit dialectic among them that best conveys the current flavor of the field. Such unique diversity and richness inspired the format of the meeting and also explains the slight departure of the present volume from the typical format in this series: the exposition of the current sediment is complemented here by a selection of qualified specialized contributions.

Computer Programs Directory, 1971 *Computer Programs Directory 1971* Association for Computing Machinery. Joint User Group, 1971 **British Books in Print**, 1986 A Collection of Technical Papers, 1991 Optimal Control of Constrained Piecewise Affine Systems Frank Christophersen, 2007-09-11

One of the most important and challenging problems in control is the derivation of systematic tools for the computation of controllers for constrained nonlinear systems that can guarantee closed loop stability feasibility and optimality with respect to some performance index. This book focuses on the efficient and systematic computation of closed form optimal controllers for the powerful class of fast sampled constrained piecewise affine systems. These systems may exhibit rather complex behavior and are equivalent to many other hybrid system formalisms combining continuous valued dynamics with logic rules reported in the literature. Furthermore piecewise affine systems are a useful modeling tool that can capture general nonlinearities e.g. by local approximation constraints saturations switches and other hybrid modeling phenomena. The first part of the book presents an introduction to the mathematical and control theoretical background material needed for the full understanding of the book. The second part provides an in depth look at the computational and control theoretic properties of the controllers and part three presents different analysis and post processing techniques.

Non-Recursive Behavioural Models in Control Analysis and Design Mihail Voicu, Octavian Pastravanu, 2023-11-15

This book develops a nonstandard approach to control systems analysis and design exploring the properties of a new type of model called non recursive behavioural models unlike the recursive behavioural models of classical state space representation. For a real plant exhibiting a linear behaviour in the vicinity of any operating point a non recursive behavioural model associated with an operating point is defined as a coherent collection of appropriately selected input state transfers where for a given timeline the plant is actuated by piecewise constant input vectors. This work successively presents mathematical preliminaries definitions of linear non recursive behavioural models techniques for state controllability analysis procedures for feedback control and optimal control design. All theoretical results are illustrated by

laboratory experiments This monograph is useful for postgraduate students research workers and practitioners interested in systems theory and its applications *Modelling Foundations and Applications* Anthony Anjorin, Huáscar

Espinoza, 2017-07-03 This book constitutes the proceedings of the 13th European Conference on Modelling Foundations and Applications ECMFA 2017 held as part of STAF 2017 in Marburg Germany in July 2017 The 18 papers presented in this volume were carefully reviewed and selected from 48 submissions The papers are organized in the following topical sections meta modeling and language engineering model evolution and maintenance model driven generative development model consistency management model verification and analysis and experience reports case studies and new applications scenarios
