Table 96.1 Summary of Emotion Theories

| Theory           | Explanation of Emotions                                                                                           | Example                                                                                |
|------------------|-------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| James-Lange      | Emotions arise from our awareness of our bodily responses to emotion-arousing stimuli: stimulus- arousal- emotion | We observe our heart racing after a threat and then we feel afraid                     |
| Cannon-Bard      | Emotion-arousing stimuli trigger our bodily responses and simultaneous subjective experience                      | Our heart races at the same time that we feel afraid                                   |
| Schachter-Singer | Our experience of emotion depends on two factors: general arousal and a conscious cognitive label                 | We may interpret our arousal as fear or excitement, depending on the context           |
| Zajonc; LeDoux   | Some embodied responses happen instantly, without conscious appraisal                                             | We automatically feel startled by a sound in the forest before labeling it as a threat |
| Lazarus          | Cognitive appraisal (is it dangerous or not?)- sometimes without our awareness- defines emotion                   | The sound is "just the wind"                                                           |
