Pelaez,Stephanie M.

Gardner,Trevor R. Anderson,2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) Isotopic Landscapes in

Bioarchaeology Gisela Grupe,George C. McGlynn,2016-03-10 This work takes a critical look at the current concept of isotopic landscapes isoscapes in bioarchaeology and its application in future research It specifically addresses the research potential

of cremated finds a somewhat neglected bioarchaeological substrate resulting primarily from the inherent osteological challenges and complex mineralogy associated with it In addition for the first time data mining methods are applied The chapters are the outcome of an international workshop sponsored by the German Science Foundation and the Centre of Advanced Studies at the Ludwig Maximilian University in Munich Isotopic landscapes are indispensable tracers for the monitoring of the flow of matter through geo ecological systems since they comprise existing temporally and spatially defined stable isotopic patterns found in geological and ecological samples Analyses of stable isotopes of the elements nitrogen carbon oxygen strontium and lead are routinely utilized in bioarchaeology to reconstruct biodiversity palaeodiet palaeoecology palaeoclimate migration and trade The interpretive power of stable isotopic ratios depends not only on firm testable hypotheses but most importantly on the cooperative networking of scientists from both natural and social sciences Application of multi isotopic tracers generates isotopic patterns with multiple dimensions which accurately characterize a find but can only be interpreted by use of modern data mining methods
