

## Review of Scientific Paper “Contact Electrification Using Force Microscopy”

Joel-Anthony Gray, B.S.E.E. Neuroscience Minor - University of Texas at Dallas

**Abstract** — Charge exchange is a mechanism previously explored and theorized about for thousands of years by macroscopic level observation and instrumentation which has proven insufficient. This paper reviews a technique which approaches the problem using a higher resolution method to track and measure charge states on materials.

**Index Terms** — Triboelectric, charge microscopy, metal-insulator contact, force microscope

## 1. BACKGROUND AND INTRODUCTION

The paper "Contact Electrification Using Force Microscopy" describes a new methodology in order to more closely study the process of exactly how charges are exchanged between two different materials that come into physical contact with each other. This property, known as the triboelectric effect, has been observed since the days of a particular Greek scholar known as Thales of Miletus (6<sup>th</sup> – 7<sup>th</sup> Century BC) who observed the electrification of materials rubbed with amber. It was he who first coined the word electricity from the Greek word for amber: "elektron".<sup>10</sup>

The types of triboelectrification are broadly divided into the metal on metal, metal on insulator and insulator on insulator. In the work of J.R. Harper during the 1960's, it was discovered that when two metals touch, the charge is equalized when the Fermi levels of the respective materials match each other.<sup>9</sup> However in the case where at one or both of the materials is insulating, the process of charge exchange has been controversial.

Some researchers claimed that only the last metal touched determined the net charge on the insulator whereas others apparently observed a cumulative effect with each metal contact. Discerning which theory is correct depends on understanding how the individual charge sites work which has been a problem of area resolution. These experiments were conducted at relatively macroscale (millimeter) regimes which can suffer from net charge inaccuracies. The findings of this

paper have found further information that can only be discerned with measurements on a smaller scale.

The modified force microscope employs a piezo-electrically driven lever on which is mounted a thin nickel wire that has been bent 90 degrees downward to an electrochemically etched tip. The piezo element is driven by an oscillator at just above 25 kHz with part of the signal being split into a lock-in amplifier which compares the phase of the signal with that of an optical interferometer sensor that monitors the movement of the lever/tip assembly.

While in operation, the tip is oscillated at just above the resonant frequency (as approaching the surface begins to change the spring constant and dampen the movement) while the AC bias frequency is kept below the tip frequency (to avoid constructive interference in the signal to the Servo Electronics) but above the feedback loop frequency response rate,<sup>4</sup> (probably to avoid creating a false reinforcement in the feedback loop which could cause unpredictable or uncontrollable behavior and oscillation).

**Writing Scientific Research Articles** Margaret Cargill, Patrick O'Connor, 2011-09-13 Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling well-documented clear narratives that convey their work honestly and in proper context, they have succeeded admirably. *Veterinary Pathology* July 2009. The book is clearly written, has a logical step-by-step structure, is easy to read, and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International* April 2009. **Writing Scientific Research Articles: Strategy and Steps** guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at [www.writeresearch.com.au](http://www.writeresearch.com.au) for more information. **Scientific Research in Information Systems** Jan Recker, 2021-10-21 This book introduces higher degree research students and early career academics to scientific research as occurring in the field of information systems and adjacent fields such as computer science, management science, organization science, and software engineering. Instead of focusing primarily on research methods as many other textbooks do, it covers the entire research process from start to finish, placing particular emphasis on understanding the cognitive and behavioural aspects of research such as motivation, modes of inquiry, theorising, planning for research, planning for publication, and ethical challenges in research. Comprehensive but also succinct and compact, the book guides beginning researchers in their quest to do scholarly work and to assist them in developing their own answers and strategies over the course of their work. Jan Recker explains in this book the fundamental concepts that govern scientific research and then moves on to introduce the basic steps every researcher undertakes: choosing research questions, developing theory, building a research design, employing research methods, and finally writing academic papers. He also covers essentials of ethical conduct of scientific research. This second edition contains major updates on all these elements plus significant expansions on relevant research methods such as design research and computational methods, a rewritten and extended chapter on theory

Pandemic: Mental health, life habit changes and social phenomena Daria Smirnova, Konstantinos N. Fountoulakis, Xenia Gonda, Pedro Morgado, 2023-01-19 **Why are quotations in academic papers taken from only secondary sources problematic?** Sandra Intemann, 2016-07-15 Essay from the year 2016 in the subject Philosophy Practical Ethics Aesthetics Culture Nature Right grade 1 3 Leuphana Universit t L neburg Wissenschaftsethik language English abstract To find out whereas quotations in academic articles and or monographs solely out of secondary and not primary sources are problematic from the perspective of academic ethics in general and business ethics in particular one will first have a closer look on the key terms An academic article is a scientific text published in a scientific journal and supervised by other scientists A monograph is a scientific text about a single subject by one author Sources are distinguished in primary and secondary sources primary sources are scientific research results which are published at first hand containing Secondary sources refer

to a primary source which was published by another author and not collected by the author himself For an evaluation of the use of the sources in a business or academic environment ethical standards and moralities are used Within academic ethics scientists have the duty to act responsibly and to define moralities for their practice and the way they do research and publish their results On the other hand the business ethics defines right or wrong behaviour in a business context To discuss whereas the use of secondary sources is problematic one will analyse the involved parties which are the users of the sources the author of the primary source the author of the secondary source and the scientific community Within all parties involved in the problem there is always a least privileged party according to John Rawls On the one hand using solely sources could be interpreted as one kind of plagiarism even if the source is cited correctly Further the readers do not make an own effort into research because she takes the easy way out using solely secondary sources The readers have to wonder whether it is legitimate to rely on the author of the secondary source that he summarized analysed etc the primary source correctly It would have a massive negative impact on academic and business ethics if the author of the secondary source made a mistake in summarizing analysing or wrong conclusion drawing As a result wrong information would be used for following work in business areas or research in academic areas On the other hand the access to primary sources may be difficult or even not possible so the use of a secondary source is the only way to use the information Further one has to wonder whether it is legal to intervene to solely use secondary sources as it violates the copyright law
