Logic-Based Methods for Optimization John Hooker, 2011-09-28 A pioneering look at the fundamental role of logic in optimization and constraint satisfaction While recent efforts to combine optimization and constraint satisfaction have received considerable attention little has been said about using logic in optimization as the key to unifying the two fields Logic Based Methods for Optimization develops for the first time a comprehensive conceptual framework for integrating optimization and constraint satisfaction then goes a step further and shows how extending logical inference to optimization allows for more powerful as well as flexible modeling and solution techniques Designed to be easily accessible to industry professionals and academics in both operations research and artificial intelligence the book provides a wealth of examples as well as elegant techniques and modeling frameworks ready for implementation Timely original and thought provoking Logic Based Methods for Optimization Demonstrates the advantages of combining the techniques in problem solving Offers tutorials in constraint satisfaction constraint programming and logical inference Clearly explains such concepts as relaxation cutting planes nonserial dynamic programming and Bender's decomposition Reviews the necessary technologies for software developers seeking to combine the two techniques Features extensive references to important computational studies And much more

Performance Evaluation of Industrial Systems David Elizandro, Hamdy Taha, 2012-04-11 Basic approaches to discrete simulation have been process simulation languages e.g. GPSS and event scheduling type e.g. SIMSCRIPT The trade offs are that event scheduling languages offer more modeling flexibility and process oriented languages are more intuitive to the user With these considerations in mind authors David Elizandro and Hamdy Taha embarked on the development of a new discrete simulation environment that is easy to use yet flexible enough to model complex production systems They introduced this environment Design Environment for Event Driven Simulation DEEDS in Simulation of Industrial Systems Discrete Event Simulation in Using Excel VBA The DEEDS environment is itself an Excel VBA add in Based on this foundation the second edition now titled Performance Evaluation of Industrial Systems Discrete Event Simulation in Using Excel VBA incorporates the use of discrete simulation to statistically analyze a system and render the most efficient time sequences designs upgrades and operations This updated edition includes new visualization graphics for DEEDS software improvements in the optimization of the simulation algorithms a new chapter on queuing models and an Excel 2007 version of the DEEDS software Organized into three parts the book presents concepts of discrete simulation covers DEEDS and discusses a variety of applications using DEEDS The flexibility of DEEDS makes it a great tool for students or novices to learn concepts of discrete simulation and this book can form the basis of an introductory undergraduate course on simulation The expanded depth of coverage in the second edition gives it a richness other introductory texts do not have and provides practitioners a reference for their simulation projects It may also be used as a

research tool by faculty and graduate students who are interested in optimizing production systems

Integer Optimization by Local Search Joachim P. Walser, 2003-06-26 Integer Optimization addresses a wide spectrum of practically important optimization problems and represents a major challenge for algorithmics The goal of integer optimization is to solve a system of constraints and optimization criteria over discrete variables Integer Optimization by Local Search introduces a new approach to domain independent integer optimization which unlike traditional strategies is based on local search It develops the central concepts and strategies of integer local search and describes possible combinations with classical methods from linear programming The surprising effectiveness of the approach is demonstrated in a variety of case studies on large scale realistic problems including production planning timetabling radar surveillance and sports scheduling The monograph is written for practitioners and researchers from artificial intelligence and operations research

Production & Operations Management Upendra Kachru, 2009 This book takes a pedagogical approach that is participative and interactive involving the case study method of learning Chapters start with an Indian case study of a well known company This is used as a capstone case for the chapter The student will find this an easy learning experience as data and additional information for these enterprises is readily available The selection of such cases makes classroom learning truly suited to the Indian business environment The value driven approach to Operations Management is used in structuring the text into three modules The first module discusses the infrastructure function of Operations Management Infrastructure function is considered to be product process capacity and location Module Two describes the structure of the operations function This includes quality and other product transformation processes Module Three focuses on the organization people and processes i e the job the work and the workplace In addition most of the mathematical techniques have been separated into supplements attached to the relevant chapters Software solutions for the techniques have been explained in the text Every mathematical technique is exemplified

with a number of solved problems Unlike many Production and Operations Management texts this book covers E commerce Industrial Safety Maintenance Environmental Management Green Productivity and new technological trends in the discipline These sections should add to the significance of exploring how firms can gain competitive advantage and promote sustainable development at the same time The last section of the book comprises of a selection of cases from The Indian Institute of Management at Ahmedabad The cases encompass the entire spectrum of Indian Industry the private and the public sectors professional and family managed business organizations service and manufacturing industries single industry and conglomerates The cases relate to Operations Strategy Supply Chain Management Capacity Planning New Products Manufacturing Technologies etc The Case Studies are of world class Prof Tirupati one of the authors of the case studies according to Management Science has penned one of the top 100 management articles in the 50 years The book is comprehensive lucid and easy to read and understand It should be of great value both to students and faculty
