Implementation Research on Problem Solving in School Settings Inga Gebel, 2019 Content of the Book The University of Potsdam hosted the 25th ProMath and the 5th WG Problem Solving conference Both groups met for the second time in this constellation which contributed to profound discussions on problem solving in each country taking cultural particularities into account The joint conference took place from 29th to 31st August 2018 with participants from Finland Germany Greece Hungary Israel Sweden and Turkey The conference revolved around the theme Implementation research on problem solving in school settings These proceedings contain 14 peer reviewed research and practical articles including a plenary paper from our distinguished colleague Anu Laine In addition the proceedings include three workshop reports which likewise focused on the conference theme As such these proceedings provide an overview of different research approaches and methods in implementation research on problem solving in school settings which may help close the gap between research and practice and consequently make a step forward toward making problem solving an integral part of school mathematics on a large scale Content PLENARY REPORT Anu Laine How to promote learning in problem solving pp 3 18 This article is based on my plenary talk at the joint conference of ProMath and the GDM working group on problem solving in 2018 The aim of this article is to consider teaching

and learning problem solving from different perspectives taking into account the connection between 1 teacher's actions and pupils' solutions and 2 teacher's actions and pupils' affective reactions. Safe and supportive emotional atmosphere is base for students learning and attitudes towards mathematics. Teacher has a central role both in constructing emotional atmosphere and in offering cognitive support that pupils need in order to reach higher level solutions. Teachers need to use activating guidance i.e. ask good questions based on pupils' solutions. Balancing between too much and too little guidance is not easy.

<https://doi.org/10.37626/GA9783959871167.0.01> RESEARCH REPORTS AND ORAL COMMUNICATIONS Lukas Baumanns and Benjamin Rott Is problem posing about posing problems? A terminological framework for researching problem posing and problem solving pp 21–31. In this literature review we critically compare different problem posing situations used in research studies. This review reveals that the term problem posing is used for many different situations that differ substantially from each other. For some situations it is debatable whether they provoke a posing activity at all. For other situations we propose a terminological differentiation between posing routine tasks and posing non routine problems. To reinforce our terminological specification and to empirically verify our theoretical considerations we conducted some task based interviews with students.

<https://doi.org/10.37626/GA9783959871167.0.02> Kerstin Brünig Long term study on the development of approaches for a combinatorial task pp 33–50. In a longitudinal research project over two years we interviewed children up to 6 times individually to trace their developmental trajectories when they solve several times the same tasks from different mathematical areas. As a case study I will present the combinatorial task and analyze how two children a girl and a boy over two years approached it. As a result of the case studies we can see that the analysis of the data product oriented or process oriented provides different results. It is also observable that the developmental trajectory of the girl is a more continuous learning process which we cannot identify for the boy.

Using problem solving in mathematics classrooms has been the object of research for several decades. However it is still necessary to focus on the development of problem solving skills and in line with the recent PISA assessment more attention is given to collaborative problem solving. This article addresses students collaborative work with problem sequences as a means to systematically develop students problem solving skills. The article offers student perspectives on challenges concerning the social atmosphere differentiation on teaching and learning in cooperation. In spite of the challenges the students experiences indicate that the use of problem sequences and group problem solving can be fruitful in mathematics education.

In this paper I attempt to present several examples of tasks and some relevant findings that investigate the possibility of basing a part of the practice oriented tasks on higher level thinking skills that are usually associated with processes of problem solving. The tasks presented and analysed here integrate problem solving components namely reversed thinking expressing

and analysing patterns and employing multiple solution methods into the learning and practicing of algebraic procedures such as creating equivalent expressions and solving equations <https://doi.org/10.37626/GA9783959871167.0.05> Thomas Gawlick and Gerrit Welzel Backwards or forwards Direction of working and success in problem solving pp 71–89 We pose ourselves the question What can one infer from the direction of working when solvers work on the same task for a second time This is discussed on the basis of 44 problem solving processes of the TIMSS task K10 A natural hypothesis is that working forwards can be taken as evidence that the task is recognized and a solution path is recalled This can be confirmed by our analysis A surprising observation is that when working backwards pivotal for success is in case of K10 to change to working forwards soon after reaching the barrier <https://doi.org/10.37626/GA9783959871167.0.06> Inga Gebel Challenges in teaching problem solving Presentation of a project in progress by using an extended tetrahedron model pp 91–109 In order to implement mathematical problem solving in class it is necessary to consider many different dimensions the students the teacher the theoretical demands and adequate methods and materials In this paper an implementation process is presented that considers the above dimensions as well as the research perspective by using an extended tetrahedron model as a structural framework In concrete terms the development and initial evaluation of a task format and a new teaching concept are presented that focus on differentiated problem solving learning in primary school The pilot results show initial tendencies towards possible core aspects that enable differentiated problem solving in mathematics teaching <https://doi.org/10.37626/GA9783959871167.0.07> Heike Hagelgans Why does problem oriented mathematics education not succeed in an eighth grade An insight in an empirical study pp 111–119 Based on current research findings on the possibilities of integration of problem solving into mathematics teaching the difficulties of pupils with problem solving tasks and of teachers to get started in problem solving this article would like to show which concrete difficulties delayed the start of the implementation of a generally problem oriented mathematics lesson in an eighth grade of a grammar school The article briefly describes the research method of this qualitative study and identifies and discusses the difficulties of problem solving in the examined school class In a next step the results of this study are used to conceive a precise teaching concept for this specific class for the introduction into problem oriented mathematics teaching <https://doi.org/10.37626/GA9783959871167.0.08> Zoltán Kovács and Eszter Kónya Implementing problem solving in mathematics classes pp 121–128 There is little evidence of teachers are using challenging problems in their mathematics classes in Hungary At the University of Debrecen and University of Nyíregyháza we elaborated a professional development program for inservice teachers in order to help them implementing problem solving in their classes The basis of our program is the teacher and researcher collaboration in the lesson planning and evaluation In this paper we report some preliminary findings concerning this program <https://doi.org/10.37626/GA9783959871167.0.09> Ana Kuzle Campus school project as an example of cooperation between the University of Potsdam and schools pp 129–141 The Campus School Project is a part of the Qualitäts Offensive Lehrerbildung project whose aim is to
