Kamtschatka Leonhard Hess Stejneger,1885 *The Hatfield SCT Lunar Atlas* Anthony Cook,2013-10-11 In 2004 it became
obvious that Henry Hatfield's original atlas wasn't suitable for all current commercially made amateur telescopes Newtonian
telescopes and astronomical refractors for many years the only choice for amateurs invert the observed image The standard
Hatfield Atlas therefore follows the IAU International Astronomical Union convention of having maps and photographs with
South at the top and West on the left an inverted image However the current ranges of Schmidt Cassegrain and Maksutov
telescopes that's most of those manufactured by Meade Celestron and many others don't invert the observed image but
instead reverse it left for right That's with North at the top and East on the left Because of the way the human visual system

works it is almost impossible to mentally mirror image a map to compare it with the view through the eyepiece so even turning an IAU standard atlas upside down doesn't help. This new SCT version of the Atlas solves this problem for observers. Identification of lunar features is made quick and easy. The new digitally re-mastered second edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions whilst preserving the layout and style of the original publications. This has been achieved by merging computer visualized Earth based views of the lunar surface derived from NASA's Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield's photographic plates using the author's own software. The result is a The Hatfield SCT Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture. It contains all the features that made the original so widely used: a combination of an index of all International Astronomical Union named primary lunar features and twelve chart areas help to locate any named lunar features of interest that can each be examined under typically five different states of illumination. Close ups of interesting features are also included. The new Atlas is supplemented by an introduction to its use, a short description of the digital re-mastering technique and a completely new section describing lunar observing techniques. At the end of the atlas there is an index of all named features and crater diameters along with a summary table of the dates and times that the original Hatfield images represent.

The Hatfield SCT Lunar Atlas Jeremy Cook, 2006-02-28. SCT and Maksutov telescopes which of course includes the best selling models from Meade Celestron and other important manufacturers reverse the visual image left for right giving a mirror image. This makes it extremely difficult to identify lunar features at the eyepiece of one of these instruments using conventional atlases which show the Moon upside down with south at the top. This new SCT version of Hatfield's famous lunar atlas solves the problem. Photographs and key maps in the Hatfield SCT Lunar Atlas are exactly as the Moon appears through the eyepiece of an SCT or Maksutov telescope. Smaller IAU standard reference photographs are included on each page to make it simple to compare the mirrored SCT photographs and maps with those that appear in other atlases. This edition uses the superb original photographs taken by Commander Henry Hatfield using his purpose built 12 inch reflector. The key maps on which lunar features can be readily identified retain the style and clarity that made the original justly famous.
