Overtreated Shannon Brownlee, 2010-06-25. Our health care is staggeringly expensive yet one in six Americans has no health insurance. We have some of the most skilled physicians in the world yet one hundred thousand patients die each year from medical errors. In this gripping eye opening book award winning journalist Shannon Brownlee takes readers inside the hospital to dismantle some of our most venerated myths about American medicine. Brownlee dissects what she calls the medical industrial complex and lays bare the backward economic incentives embedded in our system revealing a stunning portrait of the care we now receive. Nevertheless *Overtreated* ultimately conveys a message of hope by reframing the debate over health care reform. It offers a way to control costs and cover the uninsured while simultaneously improving the quality of American medicine. Shannon Brownlee's humane intelligent and penetrating analysis empowers readers to avoid the perils of overtreatment as well as pointing the way to better health care for everyone.

Image-guided Radiation Therapy Arno J. Mundt, John C. Roeske, 2010-12-31. Image Guided Radiation Therapy (IGRT) is a true revolution in the field of radiation oncology. IGRT provides the unprecedented means of conforming dose to the shape of the target tissues in 3 dimensions, reducing the risk of complications thereby improving the quality of life of irradiated patients. Moreover, IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients. Despite its established benefits, several barriers exist to the widespread clinical implementation of IGRT. In the past, great concerns existed regarding the large capital outlay needed for both software and hardware. This barrier is less relevant today given the increased reimbursements possible with IGRT. Today the most significant barrier is education. IGRT is a fundamentally new approach to both treatment planning and delivery. Adoption of the IGRT approach entails new ways of thinking in regard to patient selection, treatment planning and quality assurance measures. Unfortunately, apart from a few University based short courses, limited resources are available for the physician and physicist interested in learning IGRT.
