Maxwell on Heat and Statistical Mechanics James Clerk Maxwell, 1995 These papers shed light on the formation of Maxwell's ideas and theories within the structure of a professional scientific discipline physics that had only recently taken shape While Maxwell responded to and relied on the work of his colleagues his interpretations often placed his work apart from theirs to be exploited by later generations of physicists [Einstein's Fridge](#) Paul Sen, 2022-03-22 This entertaining eye opening account of how the laws of thermodynamics are essential to understanding the world today from refrigeration and jet engines to calorie counting and global warming is a lesson in how to do popular science right Kirkus Reviews Einstein's Fridge tells the incredible epic story of the scientists who over two centuries harnessed the power of heat and ice and formulated a theory essential to comprehending our universe Although thermodynamics has been studied for hundreds of years few nonscientists appreciate how its principles have shaped the modern world Scientific American Thermodynamics the branch of physics that deals with energy and entropy governs everything from the behavior of living cells to the black hole at the center of our galaxy Not only that but thermodynamics explains why we must eat and breathe how lights turn on the limits of computing and how the universe will end The brilliant people who decoded its laws came from every branch of the sciences they were engineers physicists chemists biologists cosmologists and mathematicians From French military engineer and physicist Sadi Carnot to Lord Kelvin James Joule Albert Einstein Emmy Noether Alan Turing and Stephen Hawking author Paul Sen introduces us to all of the players who passed the baton of scientific progress through time and

across nations Incredibly driven and idealistic these brave pioneers performed groundbreaking work often in the face of torment and tragedy Their discoveries helped create the modern world and transformed every branch of science from biology to cosmology Elegantly written and engaging Financial Times Einstein's Fridge brings to life one of the most important scientific revolutions of all time and captures the thrill of discovery and the power of scientific progress to shape the course of history

Hypersonic Inviscid Flow Wallace D. Hayes, Ronald F. Probst, 2012-07-13 Unified self-contained view of nonequilibrium effects body geometries and similitudes available in hypersonic flow and thin shock layer appropriate for graduate level courses in hypersonic flow theory 1966 edition

Lie Groups for Pedestrians Harry J. Lipkin, 2012-06-08 This book shows how well known methods of angular momentum algebra can be extended to treat other Lie groups Chapters cover isospin the three dimensional harmonic oscillator Young diagrams more 1966 edition

Applied Optics and Optical Design Alexander Eugen Conrady, Rudolf Kingslake, 1992-01-01 Classic work presents Conrady's complete system of optical design Part One covers all ordinary ray tracing methods together with the complete theory of primary aberration and as much of higher aberration as is needed for the design of telescopes low power microscopes and simple optical systems

Foundations of Radiation Hydrodynamics Dimitri Mihalas, Barbara Weibel-Mihalas, 1999-07-07 Largely self contained this expert three part treatment focuses on the dynamics of nonradiating fluids explores the physics of radiation radiation transport and the dynamics of radiating fluids and offers a brief appendix that explains the use of tensor concepts in equations related to the transition of ordinary fluids to relativistic fluids to radiation 1984 edition

Introduction to Modern Optics Grant R. Fowles, 1989-01-01 This incisive text provides a basic undergraduate level course in modern optics for students in physics technology and engineering The first half of the book deals with classical physical optics the second principally with the quantum nature of light Chapters 1 and 2 treat the propagation of light waves including the concepts of phase and group velocities and the vectorial nature of light Chapter 3 applies the concepts of partial coherence and coherence length to the study of interference and Chapter 4 takes up multiple beam interference and includes Fabry Perot interferometry and multilayer film theory Diffraction and holography are the subjects of Chapter 5 and the propagation of light in material media including crystal and nonlinear optics are central to Chapter 6 Chapters 7 and 8 introduce the quantum theory of light and

elementary optical spectra and Chapter 9 explores the theory of light amplification and lasers Chapter 10 briefly outlines ray optics in order to introduce students to the matrix method for treating optical systems and to apply the ray matrix to the study of laser resonators Many applications of the laser to the study of optics are integrated throughout the text The author assumes students have had an intermediate course in electricity and magnetism and some advanced mathematics beyond calculus For classroom use a list of problems is included at the end of each chapter with selected answers at the end of the book

Liquid Life Rachel Armstrong, 2019 If we lived in a liquid world the concept of a machine would make no sense Liquid life is metaphor and apparatus that discusses the consequences of thinking working and living through liquids It is an irreducible paradoxical parallel planetary scale material condition unevenly distributed spatially but temporally continuous It is what remains when logical explanations can no longer account for the experiences that we recognize as part of being alive Liquid life references a third millennial understanding of matter that seeks to restore the agency of the liquid soul for an ecological era which has been banished by reductionist brute materialist discourses and mechanical models of life Offering an alternative worldview of the living realm through a new materialist and liquid study of matter it conjures forth examples of creatures that do not obey mechanistic concepts like predictability efficiency and rationality With the advent of molecular science an increasingly persuasive ontology of liquid technologies can be identified Through the lens of lifelike dynamic droplets the agency for these systems exists at the interfaces between different fields of matter energy that respond to highly local effects with no need for a central organizing system Liquid Life seeks an alternative partnership between humanity and the natural world It provokes a re invention of the languages of the living realm to open up alternative spaces for exploration Rolf Hughes angelology of language explores the transformative invocations of prose poetry and Simone Ferracina's graphical notations help shape our concepts of metabolism upcycling and designing with fluids A conceptual and practical toolset for thinking and designing Liquid Life reunites us with the irreducible soul substance of living things which will neither be simply solved nor go away Rachel Armstrong is Professor of Experimental Architecture at Newcastle University UK and has also been a Rising Waters II Fellow for the Robert Rauschenberg Foundation April May 2016 TWOTY futurist in 2015 Fellow of the British Interplanetary Society and a Senior TED Fellow in 2010 She is also the coordinator of the Living Architecture project an EU funded project that establishes the principles for our buildings to share some of the properties of living things e.g. metabolism operating at the intersection of architecture building construction bio energy and synthetic biology She is also the author of Vibrant Architecture De Gruyter 2015 Star Ark A Living Self Sustaining Spaceship Springer 2017 and Soft Living Architecture An Alternative View of Bio informed Design Practice Bloomsbury 2018

Theoretical Nuclear Physics John Markus Blatt, Victor Frederick Weisskopf, 1991-01-01 A classic work by two leading physicists and scientific educators endures as an uncommonly clear and cogent investigation and correlation of key aspects of theoretical nuclear physics It is probably the most widely adopted book on the subject The authors approach the subject as the

theoretical concepts methods and considerations which have been devised in order to interpret the experimental material and to advance our ability to predict and control nuclear phenomena The present volume does not pretend to cover all aspects of theoretical nuclear physics Its coverage is restricted to phenomena involving energies below about 50 Mev a region sometimes called classical nuclear physics Topics include studies of the nucleus nuclear forces nuclear spectroscopy and two three and four body problems as well as explorations of nuclear reactions beta decay and nuclear shell structure The authors have designed the book for the experimental physicist working in nuclear physics or graduate students who have had at least a one term course in quantum mechanics and who know the essential concepts and problems of nuclear physics
