GIS Basics Stephen Wise, 2018-10-08 Geographical Information Systems GIS are computer systems for storing displaying and analyzing spatial data The past twenty years have seen a rapid growth in their use in government commerce and academia and they can be used for managing a network of utilities from handling census data through to planning the location of a new supermarket But how do they work Stephen Wise has been a regular contributor to GeoEurope and his Back to Basics articles have provided a clear and simple introduction to the inner workings of GIS for a non specialist audience He now presents the original articles with new material and provides a new coverage of both major types of GIS vector and raster systems Undergraduates and professionals who wish to improve their knowledge of GIS should get a better understanding of how GIS operate in the way that they do such as how spatial data is stored on a computer how the different methods affect the capabilities of the GIS how basic operations performed and how the choice of algorithm affects the speed of the system

A Primer of Multivariate Statistics Richard J. Harris, 2001-05-01 Drawing upon more than 30 years of experience in working with statistics Dr Richard J Harris has updated *A Primer of Multivariate Statistics* to provide a model of balance between how to and why This classic text covers multivariate techniques with a taste of latent variable approaches Throughout the book there is a focus on the importance of describing and testing one's interpretations of the emergent variables that are produced by multivariate analysis This edition retains its conversational writing style while focusing on classical techniques The book gives the reader a feel for why one should consider diving into more detailed treatments of computer modeling and latent variable techniques such as non recursive path analysis confirmatory factor analysis and hierarchical linear modeling Throughout the book there is a focus on the importance of describing and testing one's interpretations of the emergent variables that are produced by multivariate analysis
